MINIMUM HUB DIAMETER CHECK D_m

After choosing the clamping element type with the required characteristics it is necessary to make a check on the minimum extern diameter of the hub (D_m), which has to resist to the solicitations caused by the high pressures developed by the clamping element. The check is purely static and concerns just solicitations caused by the clamping element:

$$D_m \geq D \times \sqrt{\frac{R_{s 0.2} + (P_m \times C)}{R_{s 0.2} - (P_m \times C)}}$$

Where: D_m = Extern diameter of the hub (mm)

D = Extern diameter of the clamping element (mm)

$R_{s 0.2}$ = Yield point for permanent elongation of 0.2% (N/mm²)

P_m = Specific pressure exercised by the clamping element on the hub (N/mm²)

C = coefficient of the utilization in function of the hub profile (Look at the pictures below)

C = 1

C = 0.8

C = 0.6

The clamping system connects one or two components parts solidly to the drive shaft, which allows motion to be transmitted or to withstand an axial thrust. Friction connection enables gaps to be eliminated, thereby ensuring greater precision of the keyed components without requiring strict processing tolerances. The thrust cones develop a pressure between the shaft and the hub, which enables pulleys, gears, chain sprockets, drums, flywheels, etc. to be anchored safely. The easy assembly and disassembly features give users many advantages, leading to a further cost saving.

Chiaravalli Group S.p.A. provides its customers with different types of clamping elements, which are designed to cover a broad range of applications.

SHAFT CLAMPING ELEMENTS

RCK 11

SELF CENTRING RCK 11 TYPE

Suitable for assemblies where special, even heavy-duty conditions are required, achieving maximum friction clamping results. It incorporates the best features of all the models which have been presented. It operates with very high torque values.

RCK 13

SELF CENTRING RCK 13 TYPE

Suitable for assemblies where good concentricity is required in small spaces with medium- high torque values. It can substitute RCK 40 in some cases.

RCK 15

SELF CENTRING RCK 15 TYPE

Suitable for assemblies where axial and radial positioning accuracy is required with medium- high torque values. The main feature is the possibility of varying the internal bores while maintaining the external dimensions constant at only three diameters.

RCK 16

SELF CENTRING RCK 16 TYPE

Suitable for assemblies where concentricity and positioning accuracy is required. It operates with medium- high torque values.

**RCK 19****SELF CENTRING RCK 19 TYPE**

Suitable for hollow shafts, it operates by compressing the hollow shafts on the solid shafts enabling transmission of medium high twisting moments to be achieved.

**RCK 40****NOT SELF CENTRING RCK 40 TYPE**

Suitable for general applications, it is not self centring and therefore requires a centring band to ensure perfect concentricity. It operates with medium- high torque values.

**RCK 45****NOT SELF CENTRING RCK 45 TYPE**

Suitable for applications where medium-low twisting moments are required with, easy rapid assembly and disassembly operation. Not self centring.

**RCK 50****NOT SELF CENTRING RCK 50 TYPE**

Comprising two tapered rings, must always be mounted with a tightening flange. It operates with low torque values; it isn't self centring.

**RCK 55****SELF CENTRING RCK 55 TYPE**

Suitable for assemblies where limited overall dimensions and times are required. It operates with medium-low torque values.

RCK 60

SELF CENTRING RCK 60 TYPE

Suitable for assemblies where a medium-high twisting moment is required. It operates in the opposite mode to RCK 13.

RCK 61

SELF CENTRING RCK 61 TYPE

Enables adjacent components to be clamped to the hub thanks to an axial force achieved during the clamping phase. It operates with medium torque values.

RCK 70-71

SELF CENTRING RCK 70-71 TYPE (RCK 71 eventually with spacer)

The RCK version is suitable for assemblies where concentricity and orthogonal positioning of the parts is required. The RCK 71 version has the same features as RCK 70 with the addition of a spacer ring to completely avoid possible axial displacements. These components operates with medium- high torque values.

RCK 80

SELF CENTRING RCK 80 TYPE

Suitable for assemblies on hubs with thin walls guarantees both axial and radial positioning precision with medium transmission torque values.

RCK 95

Enables rigid connection between two aligned shafts. It transmits medium-high twisting moments with the advantage of enabling rapid assembly and disassembly

ORDERING EXAMPLE:

The following will be ordered with a shaft having ød 45 with torque value less or equal to 3.200 Nm:

RCK 11 - 45 x 75

Part Number 06110045

CAD drawings available on our site

www.chiaravalli.com

3D simulation available on the website.

Quantity, availability and prices on B2B Chiaravalli

ORDERING EXAMPLE:

The following will be ordered with a shaft having ϕd 40 with a torque value less than or equal 1030 Nm:

RCK 15 - 40 x 65
Part Number 06151040

CAD drawings available on our site
www.chiaravalli.com

3D simulation available on the website.

Quantity, availability and prices
on B2B Chiaravalli

ORDERING EXAMPLE:

The following will be ordered with a shaft having Ød 95 with a torque value less than or equal 8000 Nm:

RCK 80 - 80 x 100

Part Number 06800080

CAD drawings available on our site
www.chiaravalli.com

3D simulation available on the website.

Quantity, availability and prices on B2B Chiaravalli

RIGID JOINT

THE RECOMMENDED MACHINING TOLERANCES FOR THE PRESSURE SURFACES ARE AS FOLLOWS:

Ø h 8 FOR SHAFT

PART NUMBER	DIMENSIONS				maximum torque Mt Nm	CLAMPING PRESSURE Shaft N/mm ² 2	CLAMPING SCREWS DIN 912 MAT. 12.9			WEIGHT Kg

ORDERING EXAMPLE:

The following will be ordered with a shaft having Ød 40 with a torque value less than or equal 900 Nm:

RCK 95 - 40 x 75

Part Number **06950040**

CAD drawings available on our site
www.chiaravalli.com

3D simulation available on the website.
