Configuration Guidelines

Environmental Conditions

Ambient Temperature

The ambient temperature influences the gearbox and motor performance.

Please take into account the following guidelines for a correct product configuration:

- **Oil Seals:** please see the Oil seal options in each Gear Unit Section and select the correct alternative according to the operating conditions.
- **Lubricant:** if the operating temperature is outside the indicated range for the standard lubricant, please select SO to order the Gear Unit without oil and then refer to the [Lubricant table](#) to select the correct lubricant for your operating temperature range.
- **Housing and component resistance:** if the operating temperature is below -25°C, or above 50°C, please [contact Bonfiglioli Technical Service](#). From -25°C to -10°C, please start the gearmotor with partial loads.
- **Motor stator:** in case of special humidity and ambient temperature resistance requirements, please see the motor tropicalization option.

To allow a proper heat dissipation, make sure the product is installed with adequate air circulation, away from temperature-sensitive components.

For altitude < 3000m and environment temperature <50°C, these Gear Units thermal power is not a possible cause of fault. If the Gear Unit environment exceeds these limits, please [contact Bonfiglioli Technical Service](#).

Rating values are calculated for standard environmental conditions (40°C; altitude<1000m a.s.l) as specified in CEI EN 60034-1.

Motors can be used within the temperature range of -25°C and +50°C as standard. For temperature higher than 40°C the rated power output should be adjusted by factors given in the table below.

| Ambient temperature (°C) | -25°C < T < 40 | 40° | 45° | 50° |
|-----------------------------|----------------|------|-----|-----|
| k _{ft} coefficient | | 100% | 95% | 90% |

$$\text{Permitted power} = P_{n_1} \cdot k_{ft} \cdot f_m$$

For f_m please see the [Duty Cycle](#) options

Altitude

The installation altitude affects the gear unit and motor performance (for motor temperature derating data, see the [e-motor Configuration Guidelines & Setup](#) Catalog Section).

If the application altitude is above 1500 m and the gear unit is oil factory filled, place the product with the oil drain plug at the top and open it to balance out the internal air and the external atmosphere, then close the oil plug. Make sure that no object or substance falls into the gear unit, as it could damage its internal components during its operating lifetime.

If, during its lifetime, the gear unit operates with a difference of altitude higher than 1000 m, [contact Bonfiglioli Technical Service](#) to find the correct solution, based on the required performance, the seals equipped and the mounting position needed.

Environmental Conditions

Noise Level

Gear unit noise levels tested according to UNI ISO 3746. The noise of the gear unit is always lower than the motor's, which is compliant with the CEI EN 60034-9 standard.

Corrosion Protection

The gear unit and motors can be configured with several devices to enhance their protection against corrosion, see EVOX Painting Options against corrosion protection and FO option to add stainless steel components to your product.

Storage

See the Product Storage Guidelines on the EVOX user manual at www.bonfiglioli.com for a thorough description of every environment and treatment conditions (for less and more than 6 storage months).

Observe the following instructions to correctly store the products:

- a) Do not store outdoors, in areas exposed to the weather or with excessive humidity.
- b) Always place boards, wood or other materials between the products and the floor.
The gearboxes should not have direct contact with the floor.
- c) In case of long-term storage, all machined surfaces such as flanges, shafts and couplings must be coated with a suitable rust inhibiting product (Mobilarma 248 or equivalent).

In addition, the gear units must be placed with the fill plug in the highest position and filled up with oil.

Before putting the units into operation, top-up with the appropriate quantity and type of oil (refer to the User's manual available at www.bonfiglioli.com).

Gear Unit Efficiency

For Helical In-Line Gear units, consider as a general order of magnitude $0,98^{Nst}$ [Nst = stage number], for an efficient calculation.

Lubricant Table

Life lubricated gear units do not require any periodical oil changes.

Refer to the User's Manual available at www.bonfiglioli.com for indications regarding oil checks and replacement.

Do not mix synthetic and mineral oils and/or different brands.

In any case, check the oil level at regular intervals and top it up as required.

Check it monthly, if the unit operates under intermittent duty, or more frequently if duty is continuous.

As standard, factory-filled gear units are equipped with Shell Omala S4 WE320 (PAG).

Do not let the oil temperature drop below the pour point -39°C or rise above 100°C also in storage conditions.

The gear unit can be filled with different oils, according to the application needs. You can choose the gear unit SO option and fill the EVOX with one of the oils listed in the following table.

| | | Operating ambient temperature [°C] | | | | | | | | | | | | | | | | |
|--------------------|---------------------|---|---|-----|---|--|--|--|--|--|--|--|--|--|--|--|--|--|
| | | Seals conditions check Standard seals provided in the catalog | | | | | | | | | | | | | | | | |
| Splash lubrication | Mineral oil | 150 VG | | | | | | | | | | | | | | | | |
| | | 220 VG | | * | | | | | | | | | | | | | | |
| | | 320 VG | | (C) | * | | | | | | | | | | | | | |
| | | 460 VG | | | * | | | | | | | | | | | | | |
| | Synthetic oil (PAG) | 150 VG | | * | | | | | | | | | | | | | | |
| | Synthetic oil (PAG) | 220 VG | | (C) | * | | | | | | | | | | | | | |
| | Synthetic oil (PAO) | 32 VG | * | | | | | | | | | | | | | | | |
| | Synthetic oil (PAO) | 68 VG | | * | | | | | | | | | | | | | | |
| | Synthetic oil (PAO) | 150 VG | | | * | | | | | | | | | | | | | |
| | Synthetic oil (PAO) | 220 VG | | (C) | * | | | | | | | | | | | | | |
| | Synthetic oil (PAO) | 320 VG | | | * | | | | | | | | | | | | | |

Recommended operating limits

Allowed operating limits. (C)

Forbidden operating limits.

* = It is recommended to ramp-up and provide for greater absorption of the motor.

(C) If needed, and in the event of impulse loads, contact Bonfiglioli Technical Service.

ATTENTION

Bonfiglioli's factory filled gear units shouldn't be operated outside the temperature range indicated in this catalog.

Bonfiglioli shall not be liable for use of lubricants outside the suggested temperature range or mix of different lubricant types or manufacturers.

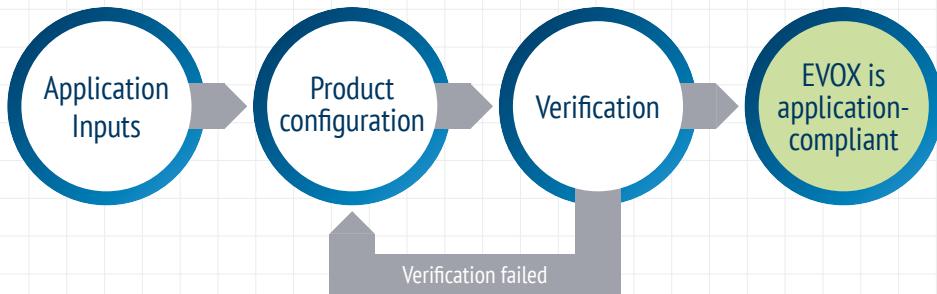

Oils with the same viscosity and different brands may have different characteristics in terms of operating temperature ranges. The table above is a general guideline; however, you should always check the oil specifications before filling and using EVOX gear units.

The oil quantity for each gear unit size is:

| Size | Volume (L) |
|------|------------|
| 07 | 0.35 |
| 17 | 0.7 |
| 37 | 1.1 |
| 47 | 1.8 |

Product Selection Guidelines

In order to correctly choose the product that fits your needs, please refer to the Application Input parameters listed below, choose the configuration in the performance table, then verify your EVOX with the [Verification parameters](#).

Application Inputs

Some fundamental data are necessary to assist the correct selection of a gearbox or gearmotor. The table below briefly sums up this information.

To simplify selection, fill in the table and send a copy to our [Bonfiglioli Technical Service](#) which will select the most suitable drive unit for your application.

| | | | |
|---|-----------------------|---|------------------|
| Type of application | A_{c2} | Thrust load on output shaft (+/-) (***) | N |
| P_{r2} Output power at n ₂kW | A_{c1} | Thrust load on input shaft (+/-) (***) | N |
| M_{r2} Output torque at n ₂Nm | J_c | Moment of inertia of the load | Kgm ² |
| n₂ Output speedmin ⁻¹ | t_a | Ambient temperature | C° |
| n₁ Input speedmin ⁻¹ | | Altitude above sea level | m |
| R_{c2} Radial load on output shaftN | | Duty type to IEC norms | S...../.....% |
| x₂ Load application distance (*)mm | Z | Starting frequency | 1/h |
| Load orientation at output | | Motor voltage | V |
| Output shaft rotation direction (CW-CCW) (**) | | Brake voltage | V |
| R_{c1} Radial load on input shaftN | | Frequency | Hz |
| x₁ Load application distance (*)mm | M_b | Brake torque | Nm |
| Load orientation at input | | Motor protection degree | IP..... |
| Input shaft rotation direction (CW-CCW) (**) | | Insulation class | |

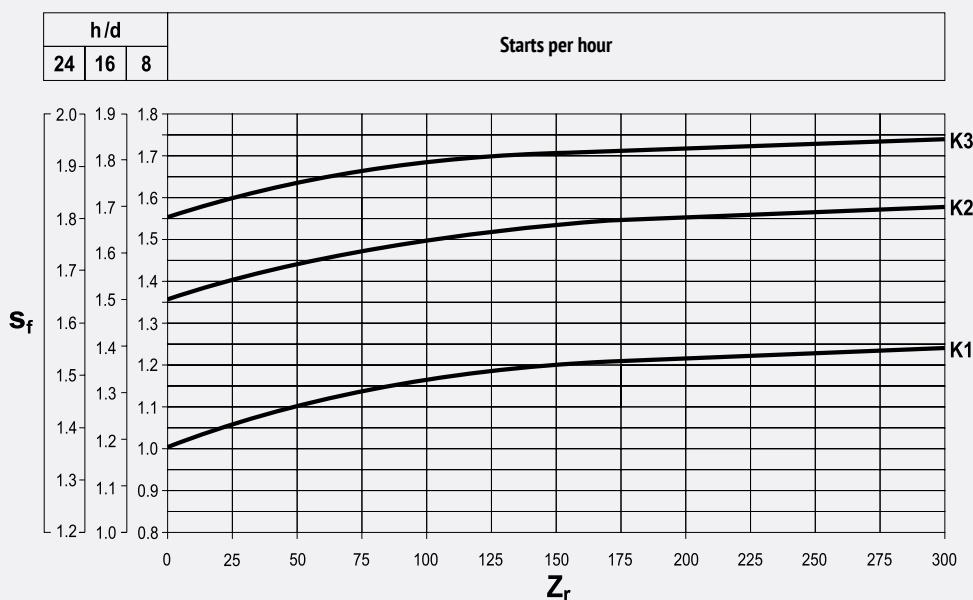

(*) Distance x1-2 is between force application point and shaft shoulder (if not indicated the force acting at mid-point of the shaft extension will be considered).

(**) CW = clockwise; CCW = counterclockwise

(***) + = push; - = pull

Application Service Factor

The service factor [f_s] is the ratio between the Nominal Table Torque [M_2] and the Calculated Torque [M_{c2}] needed by your Application.

The [f_s] calculation depends on 3 factors in the previous diagram:

- **Startup frequency [Z_r]:** this parameter describes the Gear Unit start-ups per hour
- **Daily work hours:** this parameter selects the y axis where you can check your service factor [f_s]
- **Mass acceleration factor [K_x]:** this parameter describes the shock loads of your application on the Gear Unit and drives the f_s curve selection

| | | |
|---|--|-------------------------------|
| K1: Uniform Load | $K \leq 0.25$ | When $K = \frac{J_c}{J_m}$ |
| K2: Moderate shock load | $0.25 < K \leq 3$ | |
| K3: Heavy shock load | $3 < K \leq 10$ | |
| K4: Contact Bonfiglioli's Technical Service | $K > 10$ | |
| $J_c = \text{Driven masses moment of inertia reduced to the motor shaft}$ | | |
| $J_c = J_a \left(\frac{1}{i_a^2} \right)$ | $J_a = \text{Driven masses moment of inertia reduced to the Gear Unit Output Shaft}$ | \leftarrow |
| $i_a = \text{Gear Unit Application Gear Ratio}$ | | |
| $J_m = \text{EVOX e-motor moment of inertia reduced to the motor shaft}$ | | |

Product Selection Guidelines

Gear Unit Selection

Gear Unit Configuration

- Determine service factor [f_s] according to type of duty (factor K), number of starts per hour [Z_r] and hours of operation.
- From values of torque [M_{r2}], speed [n_2] and efficiency [η_d] the required input power can be calculated from the equation:

$$P_{r1} = \frac{M_{r2} \cdot n_2}{9550 \cdot \eta_d} \text{ [kW]}$$

Value of [η_d] for the captioned gear unit can be sorted out from [Gear Unit Efficiency paragraph](#).

- Consult the gearmotor selection charts and locate the table corresponding to normalised power [P_n]:

$$P_n \geq P_{r1}$$

Unless otherwise specified, power [P_n] of motors indicated in the catalogue refers to continuous duty S1. For motors used in conditions other than S1, the type of duty required by reference to CEI 2-3/IEC 34-1 Standards must be mentioned.

For duties from S2 to S8 in particular and for motor frame 132 or smaller, extra power output can be obtained with respect to continuous duty see the [e-motor Configuration Guidelines & Setup](#) catalog section

Accordingly the following condition must be satisfied:

$$P_n \geq \frac{P_{r1}}{f_m}$$

The adjusting factor [f_m] can be obtained from table above.

Intermittence ratio

$$I = \frac{t_f}{t_f + t_r} \cdot 100$$

t_f = work time at constant load
 t_r = rest time

| Duty | | | | | | Please contact us | |
|-------|----------------------|------|------|---------------------------|------|-------------------|--|
| S2 | | | S3* | | | | |
| | Cycle duration [min] | | | Cycle duration factor [l] | | | |
| 10 | 30 | 60 | 25% | 40% | 60% | | |
| f_m | 1.35 | 1.15 | 1.05 | 1.25 | 1.15 | 1.1 | |

* Cycle duration, in any event, must be 10 minutes or less. If it is longer, please [contact Bonfiglioli Technical Service](#)

Next, refer to the appropriate $[P_n]$ section within the gearmotor selection charts and locate the unit that features the desired output speed $[n_2]$, or closest to, along with a safety factor S that meets or exceeds the applicable service factor $[f_s]$.

The safety factor is so defined:

$$S = \frac{M_{n2}}{M_2} = \frac{P_{n1}}{P_1}$$

Selection of speed reducer and gearbox with IEC motor adapter

- a) Determine service factor $[f_s]$.
- b) Assuming the required output torque for the application $[M_{r2}]$ is known, the calculation torque can be then defined as:

$$M_{c2} = M_{r2} \cdot f_s$$

- c) The gear ratio is calculated according to requested output speed $[n_2]$ and drive speed $[n_1]$:

$$i = \frac{n_1}{n_2}$$

Once values for $[M_{c2}]$ and $[i]$ are known consult the rating charts under the appropriate input speed $[n_1]$ and locate the gear unit that features the gear ratio closest to $[i]$ and at same time offers a rated torque value $[M_{n2}]$ so that:

$$M_{n2} \geq M_{c2}$$

If a IEC normalized motor must be fitted check geometrical compatibility with the gear unit in [Gear Units](#) [Performance tables](#).

Product Selection Guidelines

Verification

The maximum torque (intended as instantaneous peak load) applicable to the gearbox must not, in general, exceed 200% of rated torque [M_{n2}]. Therefore, check that this limit is not exceeded, using suitable torque limiting devices, if necessary.

After the selection of the speed reducer, or gearmotor, is complete it is recommended that the following verifications are conducted:

Thermal capacity

For altitude < 3000m and environment temperature < 50°C, these Gear Units thermal power is not a possible cause of fault. If the Gear Unit environment exceeds these limits, please [contact Bonfiglioli Technical Service](#).

To allow a proper heat dissipation, make sure the product is installed with adequate air circulation, away from temperaturesensitive components.

Load Conditions on Gear Unit Shafts

Please shown in the [Catalog Performances Table](#).

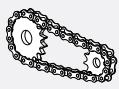

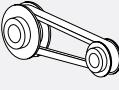

External Load Calculation on Gear Unit Shafts

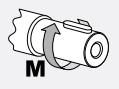

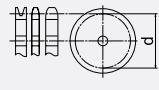

External transmission could generate loads on the Gear Unit shafts.

The guidelines below are used to calculate the radial load.

This is a very simplified method to get the order of magnitude of the radial loads on the Gear Unit shafts. We recommend you follow more detailed considerations on your application to select the correct EVOX Gear Unit.

$$R_c = \frac{2000 \cdot M_a \cdot K_r}{d}$$

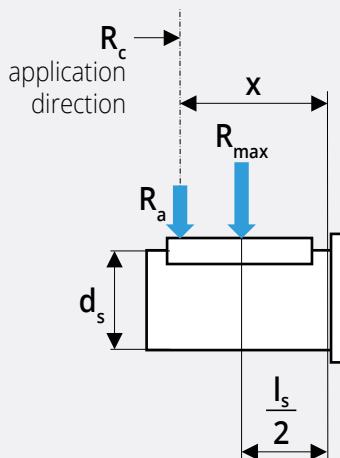

| | |
|-------------------|---|
| $K_r = 1$ |  |
| $K_r = 1.25$ |  |
| $K_r = 1.5 - 2.0$ |  |

| | |
|------------|---|
| M_a [Nm] |  |
| d [mm] |  |

Position of the Force Radial Component on the Gear Unit Shafts

Radial loads in performance tables are considered in the middle of the shaft.

If you want to compare them with the $[R_c]$ needed, you have to convert value $[R_{max}]$ in the performance tables with the following formula, to obtain the same stress on the bearing, considering a $[R_{max}]$ application straight shifting, in superposition with the $[R_c]$.

$$R_a = R_{max} \frac{l_1}{l_2 + x}$$

The following formula needs to be verified:

$$R_a > R_c$$

Check values $[l_1]$ and $[l_2]$ in the following tables:

| Coaxial Gear Unit Output Shaft | | | | | | | | |
|--------------------------------|-------|-------|----|----|-------|-------|-------|--------|
| Size | l1 | l2 | ds | ls | l1 | l2 | ds | ls |
| [mm] | | | | | | | | |
| 07 | 87 | 67 | 20 | 40 | 3.425 | 2.638 | 3/4 | 1-9/16 |
| 17 | 97.75 | 77.75 | 20 | 40 | 3.848 | 3.061 | 3/4 | 1-9/16 |
| 37 | 118 | 93 | 25 | 50 | 4.646 | 3.661 | 1 | 2 |
| 47 | 130.2 | 100.2 | 30 | 60 | 5.126 | 3.945 | 1-1/4 | 2-3/8 |

| Solid input shaft | | | | |
|-------------------|-------|-------|-----|--------|
| Size | l1 | l2 | ds | ls |
| [mm] | | | | |
| HS1 | 97 | 77 | 16 | 40 |
| HS2 | 81 | 61 | 19 | 40 |
| HS3 | 117.5 | 92.5 | 24 | 50 |
| [in] | | | | |
| NHS1 | 3.819 | 3.032 | 5/8 | 1-9/16 |
| NHS2 | 3.189 | 2.402 | 3/4 | 1-9/16 |
| NHS3 | 4.626 | 3.642 | 7/8 | 2 |

Axial Load on Shafts

On both input and output shafts, consider 50% of the value listed in [Output Radial Load](#) table as an axial load limit, if there isn't a radial force component on the shaft.

If the force on the output shaft has both radial and axial components, [contact Bonfiglioli technical Service](#) and check if your solution is suitable.

EVOX Coaxial Gearmotor & Gear Unit

Product Overview

EVOX is Bonfiglioli's new geared motor platform; the EVOX family starts with the new **CP**.

EVOX CP is an helical in-line product designed with a smooth surface and a performance/value focus. Its footprint aligned with market standards allows fitting your machine without changing the gear unit interface. Thanks to the wide range of versions/options and motor technology available in [Bonfiglioli's portfolio](#), this new product can be adapted to any machine need.

| Features | Benefits |
|---|--|
| Market standard footprint | Fits easily on every machine interface |
| Smooth surface | Easy-clean shape |
| Every mounting position available with the standard Product | Lower stock codes |
| High torque density for in-line technology | High roughness and performances |
| Reinforced radial/axial bearing option | Product ready for decentralized transmission |
| Feet & flange output & high speed ratios | Product ready for pumps & compressors |

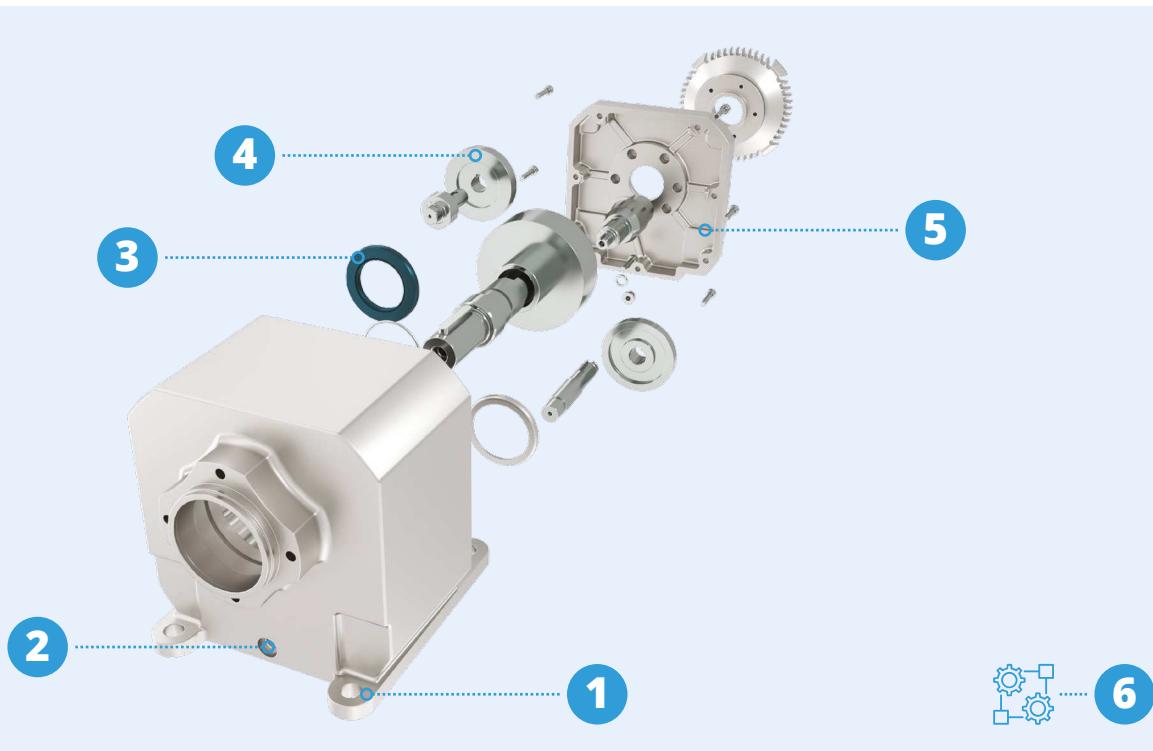

| EVOX CP sizes | Nominal torque [Nm] | Gear ratio range | Max radial loads [N] ¹ | Max Compact Gearmotor Power [kW] | [hp] |
|---------------|------------------------|------------------|--------------------------------------|--|--|
| 07 | 55 | 2.8-81.2 | 1600 | 0.37 | 0.5 |
| 17 | 100 | 2.4-85.9 | 1770 | 0.75 | 1 |
| 37 | 200 | 2.3-133 | 4500 | up to 1.5kW; Higher Powers are Coming Soon | up to 2hp; Higher Powers are Coming Soon |
| 47 | 335 | 2.4-172 | 5000 | | |
| 57 | 500 | | | | |
| 67 | 650 | | | | |

(1) Max performances @ 1400 rpm in input, Nominal output torque and radial load, applied in the middle of the o. shaft.
This value could change with the gear ratio

Product Overview

Technical Features

Gear Unit – Coaxial CP

- 1** MKT standard footprint
- 2** Every mounting position possible with one product

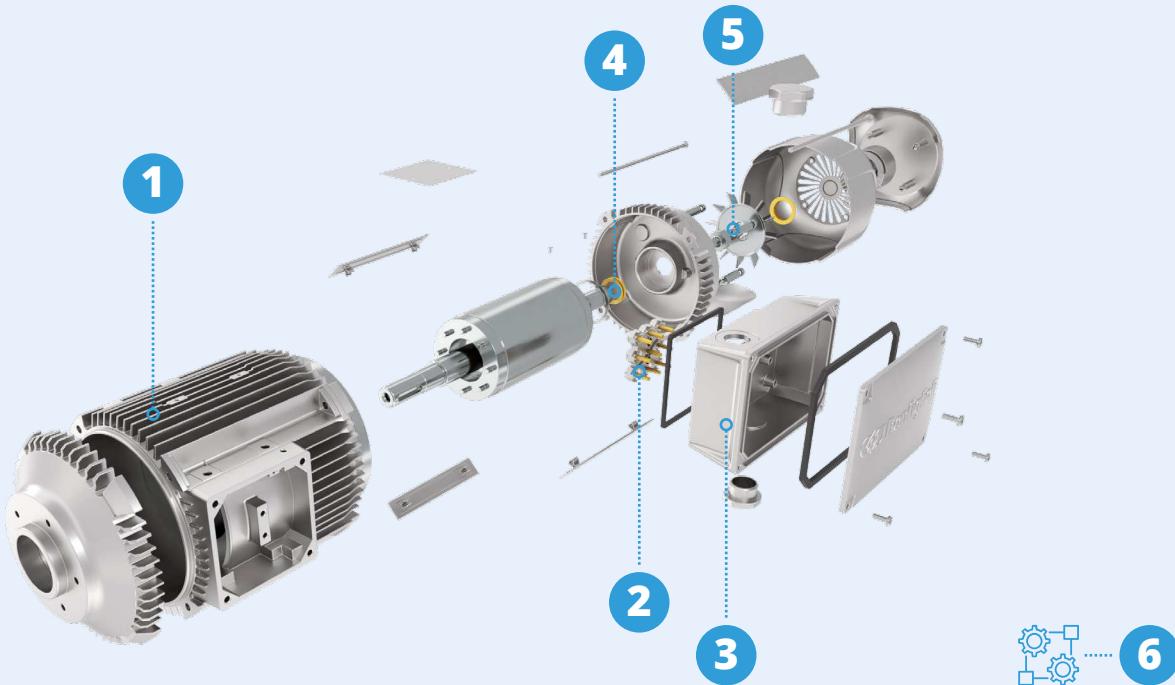

With its unique oil level, this gear unit can be fitted on any position. This also means less plugs and leakages.
- 3** Reliability focus for every standard component

Using more reliable components improves the reliability of the whole product.
- 4** Efficiency and low noise gears set

These highly effective gears reduce oil heating, preventing its leakage through the seals.
- 5** Product flexibility/modularity

Easy assembly with simple tools.
- 6** Great set of versions and options

Electric Motor – MXN/MNN

1 Uncompromised IE3/NEMA Premium Efficiency

This motor is compliant with the most severe regulations in the world in terms of efficiency.

2 One motor for EU, USA, India & Australia

With its particular 9 PIN connection, by simply changing the plugs arrangement, you could get the right tension for most Countries as Standard.

3 Reliability focus for every standard component

Using more reliable components improves the reliability of the whole product.

4 Rotating terminal box

With this feature, you could rotate the terminal box in every position you need.

5 Modular brakes, encoders and fans

6 Great set of versions and options

Product Overview

Suitable applications

- Product fully interchangeable with MKT standard

- IE3/NEMA Premium uncompromised efficiency

Making it technically ready for premium efficiency applications worldwide.

High axial & radial loads options

Making this product suitable for screw conveyors and/or decentralized transmissions.

MKT best in class by torque

Making the product with the highest torque density of its category.

AUTOMATIC GATES & BARRIERS

RECYCLING

Mounting Positions

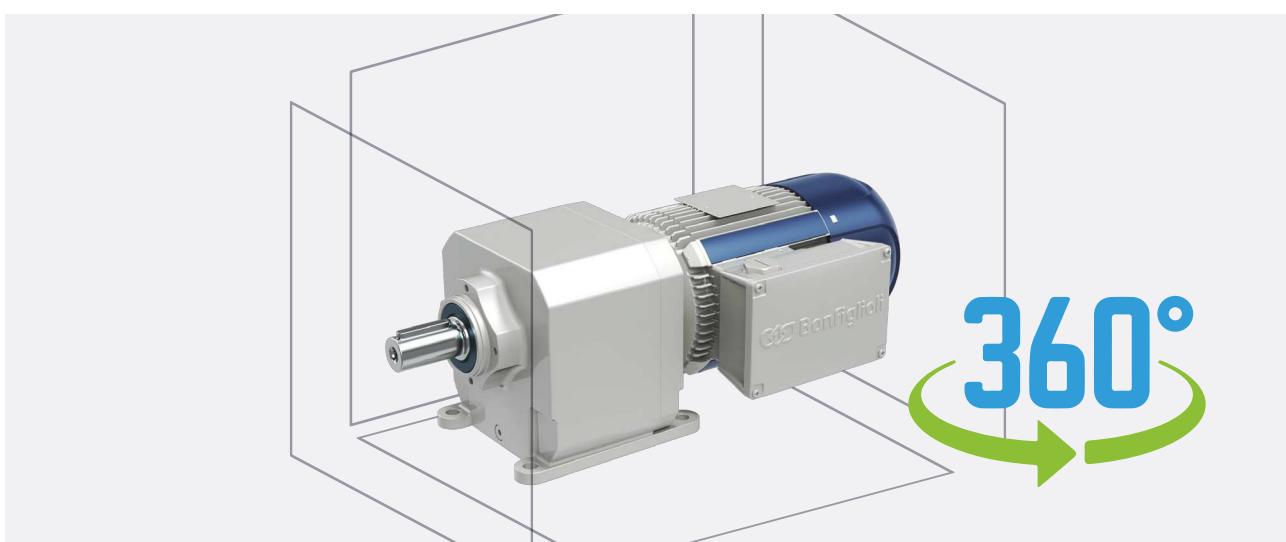

Gear Unit – Coaxial CP

Every mounting position possible with one code

Thanks to the enhanced performances and the reliability of standards components, this gear unit can be mounted in every mounting position possible as standard.

The EVOX CP is supplied as standard with long life oil fill and a unique oil level for each mounting position; if the SO option is selected, the Gear Unit can be filled with a unique drain/fill plug between the feet.

This feature can boost your project flexibility and allow you to fit this product in positions that couldn't be reached without a tailored solution.

Mounting position limitations

[Reinforced output bearings option \[OHA - OHR\]](#)

If you need EVOX CP with both:

- OHR or OHA
- Vertical position with the output shaft on top, or a position within 60° from it, facing any direction,

[Contact Bonfiglioli's Technical Service](#) and check if the standard oil level is correct for your application, or if you require a tailored solution.

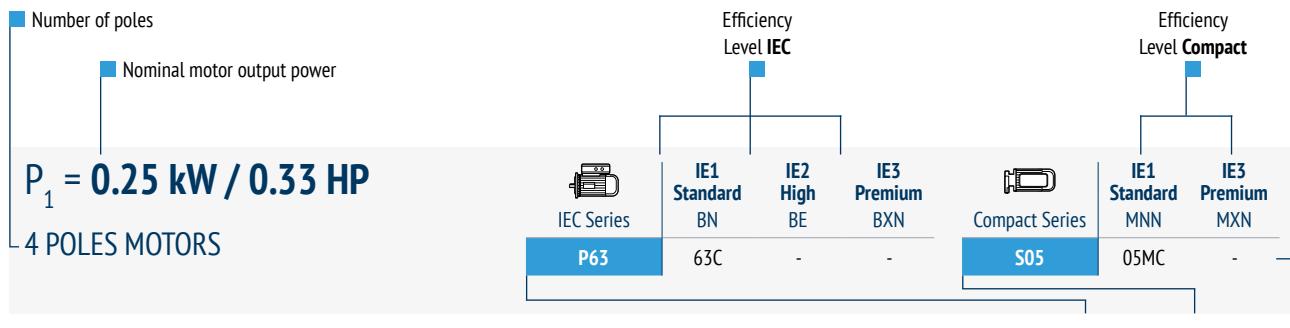

Performances

EVOX Coaxial Gearmotor

Tables introduction

Motor availability in portfolio x size

The table provides performance data for the EVOX Coaxial Gearmotor across different power levels and operating conditions. It includes calculated output torque and speed based on a service factor.

| Power | 50Hz-1 400 rpm [4 Poles] | | | | 60Hz-1 700 rpm [4 Poles] | | | | i | Size | Stages | IEC Input | Compact EVOX Input | | |
|-----------|--------------------------|----|----------------|----------------|--------------------------|----------------|----------------|---|-------|------|--------|-----------|--------------------|-------|-----|

Service factor: $f_s = M_{2s} / M_{2n2}$
You can see M_{2s} in the Gear Unit Performance Table

Calculated output torque with the indicated compact IE3/NEMA Premium motor

Calculated output speed with the indicated compact IE3/NEMA Premium motor

IEC Motor size

Compact Motor size

Performance data calculated at a temperature of 25°C, and altitude < 1000m.

Refer to the [Configuration Guidelines & Setup](#) section, before configuring the motor, to select the correct power.

EVOX Coaxial Gear Unit

Tables introduction

The following tables show geometrically possible combinations between gear ratios and inputs for each gear unit size.

For each of these combinations, we have calculated a possible service factor using the maximum motor power that can be coupled in Bonfiglioli's asynchronous electric motors portfolio (considering different poles and efficiency levels). In the table, combinations with a service factor below 0.9 are highlighted with a lighter color. Here you should pay attention to the power of the electric motor coupled with the gear unit, because it shouldn't exceed the "Maximum input power" shown in the table.

The left table section shows the inputs that are geometrically compatible with each gear ratio by IEC, NEMA and solid input shaft size. For further information on the input interface dimensions, see the Dimension section of this document.

Nominal output torque calculated at maximum radial load on the output shaft.

Performance data calculated at a temperature of 25°C and altitude < 1000m.

Coming soon

Gearbox performance data is calculated at 1400 rpm, data at 1700 rpm will be available soon. For IEC asynchronous gearmotors, consider the performance table of the EVOX CP gearbox as a reference. For configurations not listed in that section, please consider the Max Input Power Pn on this page as a limit not to be exceeded even at 60Hz.

Maximum Guaranteed Radial Loads: if table value is CST or required values exceed the one indicated on the table, please [contact Bonfiglioli technical service](#)

Maximum Guaranteed Axial Loads: for more information about Standards values or OHA options, please [contact Bonfiglioli technical service](#)

 Input power shouldn't exceed the "Max input power"
Please, configure N140TC, to have the N143TC or N145TC input flange; or configure N180TC, if you want the N182TC or N184TC; or select N210TC, to have the N213TC or N215TC

Coming soon

Gearbox performance data is calculated at 1400 rpm, data at 1700 rpm will be available soon. For IEC asynchronous gearmotors, consider the performance table of the EVOX CP gearmotor as a reference. For configurations not listed in that section, please consider the Max Input Power Pn on this page as a limit not to be exceeded even at 60Hz.

Maximum Guaranteed Radial Loads: if table value is CST or required values exceed the one indicated on the table, please [contact Bonfiglioli technical service](#)

Maximum Guaranteed Axial Loads: for more information about Standards values or OHA options, please [contact Bonfiglioli technical service](#)

 Input power shouldn't exceed the "Max input power"

Please, configure N140TC, to have the N143TC or N145TC input flange; or configure N180TC, if you want the N182TC or N184TC; or select N210TC, to have the N213TC or N215TC

Performances

EVOX Coaxial Output Radial Loads

Tables introduction

Max radial loads are calculated with:

- M_{n2} torque applied on output shaft
- Worst Gear Unit rotating direction [CW or CCW]
- The radial force applied with the worst calculated angle α for each gear ratio
- Radial load installed in the middle of the output shaft

The permitted radial loads can increase considerably when the parameters listed above vary. [Contact Bonfiglioli's Technical Service](#) if your application requires radial loads greater than the values indicated in the tables, because they may be available with a standard gear unit or with a simple option

Option | EVOX Coaxial Gear Unit Side

Option List Deep Dive

Lubricant

Gear Units are supplied as standard with the correct amount of oil necessary in their lifetime.

SO

Without oil fill

With this option active, Gear Units are supplied without lubricant. See the [Lubricant Oil Table](#) to fill your gear unit with the correct lubricant according to the application's ambient conditions.

Oil seals

Gear Units are supplied as standard with a Viton Seal in input and a single lip NBR Seal in output.

Suggested versions:

| | | | | | |
|---|---------------------------|--------------------------------|-------------------------------------|--------------------------------|-------------------------|
| Ambient temperature Suggested Oil Seal Option | Below -25°C CTS | From -25°C to 0°C PN | From 0°C to 35°C Standard | From 35°C to 50°C PV | Over 50°C CTS |
|---|---------------------------|--------------------------------|-------------------------------------|--------------------------------|-------------------------|

CTS = [Contact Bonfiglioli's Technical Services](#).

PV

Viton input and output seals

With this option active, Gear Units are supplied with Viton seals both in input and output.

PN

NBR output & input seals

With this option active, Gear Units are supplied with NBR seals both in input and output.

Output lip seals

Gear Units are supplied as standard with a single output lip seal.

DL

Double lip seal

With this option active, Gear Units are supplied with a double lip NBR seal in output.

Select with this option also the "PV", if you want the double lip Viton seals in output.

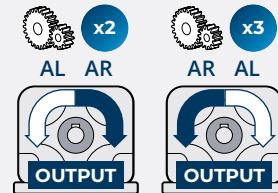

Gear unit backstop – Only for HS../NHS.. inputs

Gear Units could be supplied with a backstop with HS input. For gearmotor backstops, see the [Motor Option List](#). Be mindful that the Clockwise [CW] and Counterclockwise [CCW] rotation option depends on the Gear Unit stage number.

AR/AL

Free right/left rotation backstop

- AR: free right rotation
- AL: free left rotation

Output reinforced bearings

Gear Units are supplied with rough and reliable roller bearings from leading brands as standard; however, if your application requires higher performances, you can choose heavy duty bearings in output with the following options.

OHR

Enhanced radial load capacity

With those bearing, the radial loads at the gearbox output would be increased. This is the right solution for a belt and pulley or a chain-pinion transmission. The values listed in the following table are the rated one and may vary with output speed and service factor. Refer to the [Output Radial Load](#) Performance table to choose the right bearing for your application.

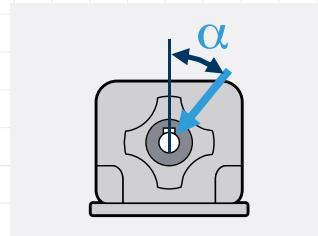

| | | CP07 | CP17 | CP37 | CP47 | CP57 | CP67 |
|--------------------------------------|------------------|------|------|------|------|-------------|------|
| Max permitted pure radial loads [kN] | Standard version | 1.6 | 1.8 | 4.5 | 5.0 | | |
| | OHR option | CTS | 3.5 | 7.1 | 8.5 | Coming Soon | |

CTS = [Contact Bonfiglioli's Technical Services](#).

Parameters are calculated with the following criterias:

- $[M_{n2}]$ torque applied on output shaft
- Worst Gear Unit rotating direction [CW or CCW]
- The radial force applied with the worst calculated angle α for each gear ratio
- Radial load installed in the middle of the output shaft

The permitted radial loads can increase considerably when the parameters listed above vary. [Contact Bonfiglioli's Technical Service](#) if your application requires radial loads greater than the values indicated in the tables, because they may be available with a standard gear unit or with a simple option.

OHA

Enhanced axial load capacity

With those bearing, the axial loads at the gearbox output would be increased. This is the right solution for axial pumps or screw conveyors. On output shafts, consider 50% of the value listed in [Output Radial Load](#) table as an axial load limit, if there isn't a radial force component on the shaft. If the axial load you need exceeds this limit, you can use the OHA option. Max axial load values are listed below:

| | | CP07 | CP17 | CP37 | CP47 | CP57 | CP67 |
|-------------------------------------|------------|------|------|------|------|-------------|------|
| Max permitted pure Axial loads [kN] | OHA option | | | 15.0 | 18.0 | Coming Soon | |

CTS = [Contact Bonfiglioli's Technical Services](#).

This values are not dependent from Service factor or output speed but are referred to pure axial loads. If the force on the output shaft has both radial and axial components, [contact Bonfiglioli's Technical Service](#) and check if your solution is suitable.

Option | EVOX Coaxial Gear Unit Side

Option List Deep Dive

Input reinforced bearings – Only for HS../NHS.. inputs

Gear Units are supplied with rough and reliable roller bearings from leading brands; however, if your application has different requirements, we can provide:

IHB

Compatibility: All sizes

With those bearing, the radial loads capacity in input of the gear unit could be enhanced. This is the right solution for a belt and pulley or a chain-pinion transmission. Please [contact Bonfiglioli's Technical Service](#) to select the right solution for you.

Reduced backlash

RB

Compatibility: All sizes

With this option active, Gear Units are supplied with a reduced angular backlash compared to the standard version.

| Size | Standard backlash | | Reduced backlash | |
|------|-------------------|----------|------------------|----------|
| | 2 stages | 3 stages | 2 stages | 3 stages |
| 07 | 11-18 | 20-25 | 7-12 | 10-16 |
| 17 | 11-18 | 20-25 | 7-12 | 10-16 |
| 37 | 11-18 | 20-25 | 7-12 | 10-16 |

Value expressed in inch

Paint

Gearboxes with optional protection to class C3 or C4 are available in the colors listed in the following table.

| Painting | Color | RAL number |
|-----------|----------------|------------|
| RAL7042 * | Traffic Grey A | 7042 |
| RAL5010 | Gentian Blue | 5010 |
| RAL9005 | Jet Black | 9005 |
| RAL9006 | White Aluminum | 9006 |
| RAL9010 | Pure White | 9010 |
| RAL7035 | Light Grey | 7035 |
| RAL7001 | Silver Grey | 7001 |
| RAL7037 | Dusty Grey | 7037 |
| RAL5015 | Sky Blue | 5015 |
| RAL5024 | Pastel blue | 5024 |

* Gearboxes are supplied in this standard color if no other color is specified.

NOTE: "Paint" options can only be specified in conjunction with "Surface protection" options.

Surface protection

When no specific protection class is requested, the surface of the gearboxes is protected at least to corrosion class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with **C3** and **C4** surface protection, obtained by painting the entire gearbox.

| Surface protection | Typical environments | Maximum surface temperature | Corrosion class according to UNI EN ISO 12944-2 |
|--------------------|--|-----------------------------|---|
| C3 | Urban and industrial environments with up to 100% relative humidity (medium air pollution) | 120°C | C3 |
| C4 | Industrial areas, coastal areas, chemical plants, with up to 100% relative humidity (high air pollution) | 120°C | C4 |

Gearboxes with optional protection class **C3** or **C4** are available in a choice of colors.

Gearboxes can also be supplied with surface protection for corrosion class **C5** according to UNI EN ISO 12944-2. [Contact Bonfiglioli Technical Service](#) for further details.

Food-Ready Gear Unit

F0

Enhanced radial load capacity

With this shaft option, plugs, screws and nameplates are made of stainless steel (INOX) or steel with zinc flake coating. The gear unit is factory-filled with Klübersynth UH16-320 (pour point=30°C and max temperature=100°C) and PWH White Paint (Paint FDA and NFS Compliant, for incidental food contact areas as well as for drinking water contact).

Besides an improved corrosion resistace, this painting is also resistant to most of the detergents commonly used in food&beverage industries.

For the particular organic-based material, no RAL color can be precisely specified.

EVOX Electric Motor

Product Overview

Bonfiglioli Portfolio

EVOX BXN, MXN and MNN are asynchronous low voltage (<1000V) e-motors and brakemotors, developed in the sign of modularity, efficiency and reliability.

The aim of this product is to be compliant with your needs, both in standalone version and in a compact coupling with Bonfiglioli Gear Units.

The Motor and Inverter in Bonfiglioli History

In the 1990s, Bonfiglioli integrated its gear unit design within the portfolio and the know-how of an important local company, and started designing its own electric motors to create robust and efficient gearmotors.

Over the last years, Bonfiglioli has integrated its offering with servo and reluctance motors and, with the acquisition of Vectron in 2001, now it can design and manufacture also inverters, and it has become a **Solution Provider**.

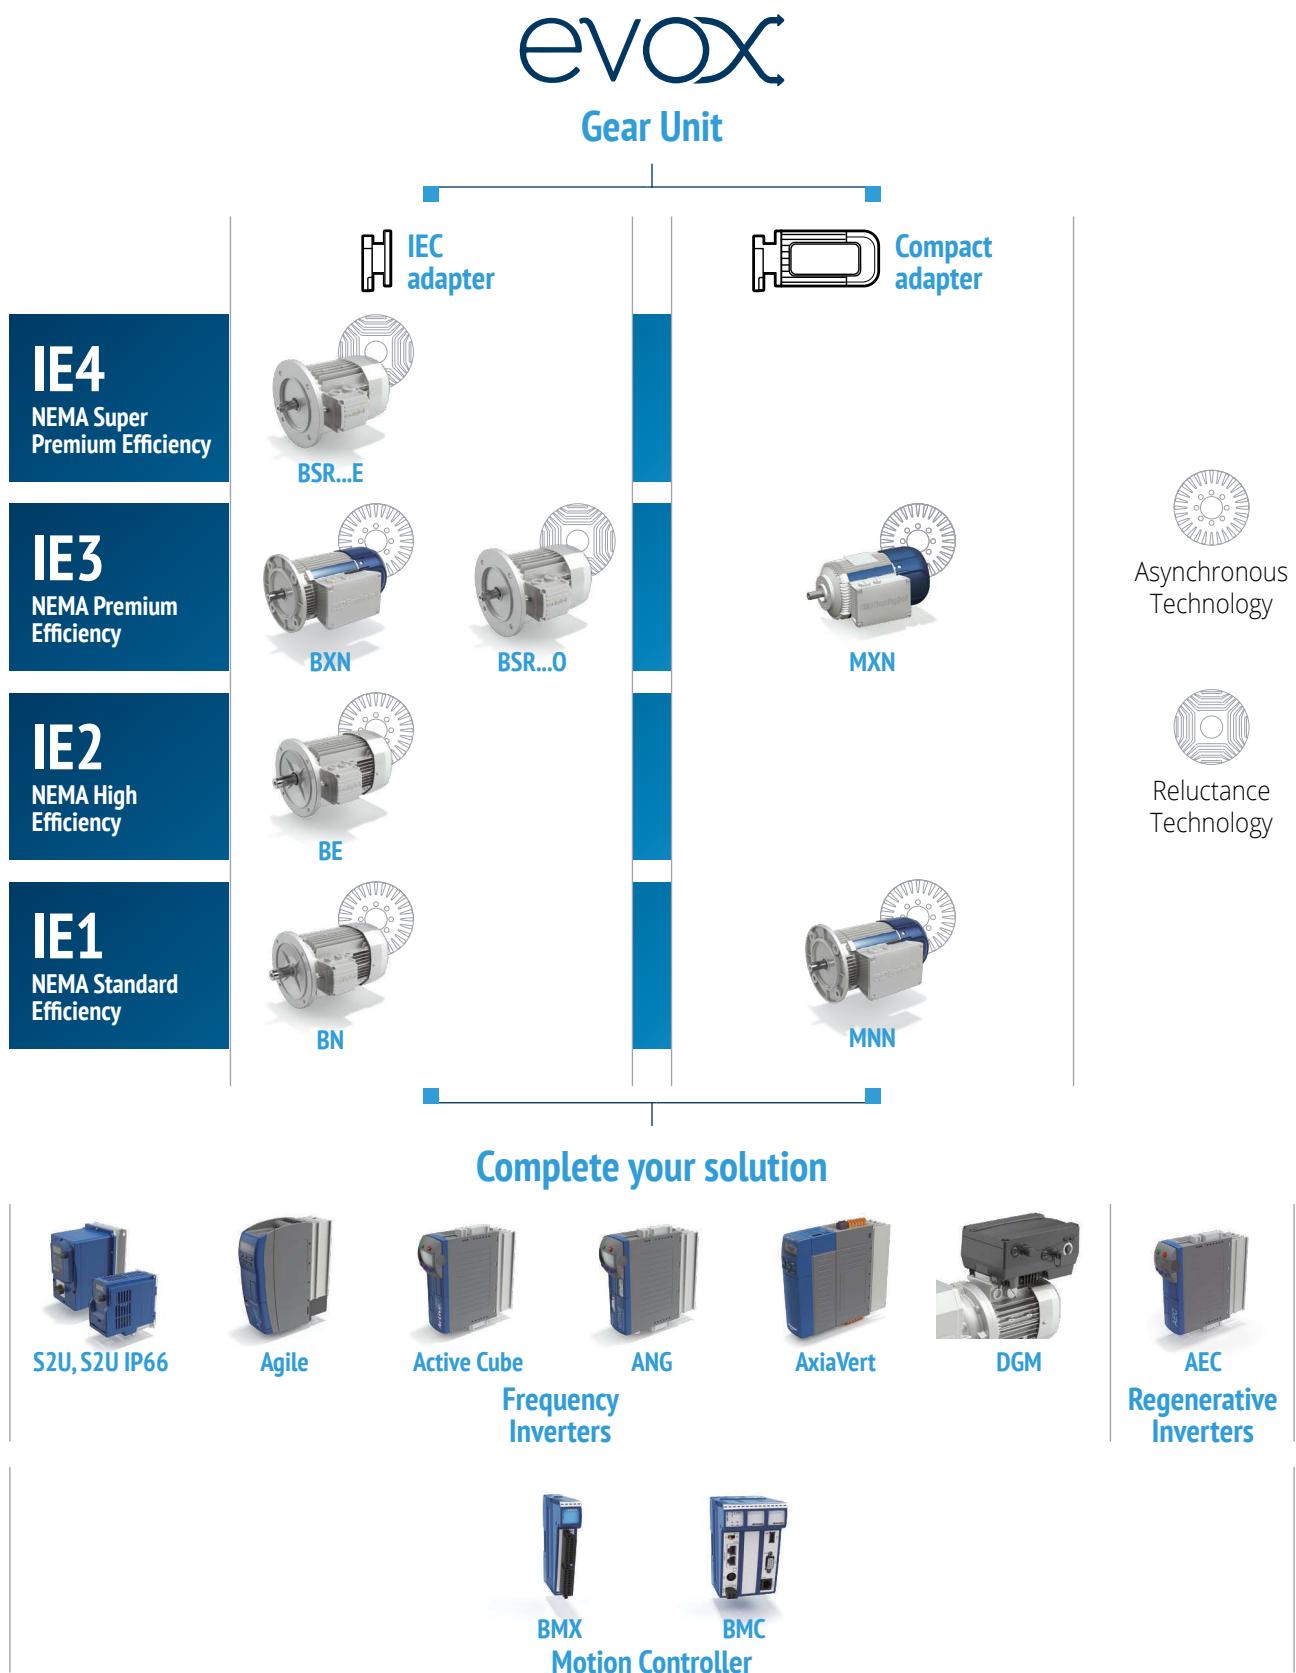

Product Overview

Bonfiglioli Portfolio

E-motor Offer

Bonfiglioli offers a great set of opportunities to match your application requirements around the world: you just need to choose your solution.

Product Overview

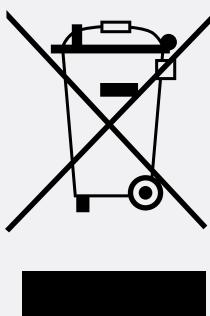

Standards & Directives

CE Mark on label

Motors are CE marked, that means they meet Directive LVD 2006/95/EC and Directive EMC 2004/108/EC. As for Directive EMC 2004/108/EC, it is also in accordance with CEI EN 60034-1, CEI EN 61000-6-1 and CEI EN 61000-6-3.

Motors with FD brakes, when fitted with the suitable capacitive filter at rectifier input (option CF), meet the emission limits required by Standards CEI EN 61000-6-3 and CEI EN 60204-1.

The responsibility for final product safety and compliance with applicable directives rests with the manufacturer or the assembler who incorporate the motors as component parts.

This product should not be mixed with general household waste.

Disposal has to be carried out in conformity with Directive 2012/19/EU, where established, and in accordance to national regulations.

They should be disposed of in accordance with any other legislation in force through the country.

National Standards

Motors are externally ventilated (IC 411) according to CEI EN 60034-6 and are equipped with a plastic fan cooling working in both directions.

Motors must be installed allowing access for maintenance purposes on motor and brake, if supplied.

For other cooling devices, please see the options section in this catalog.

Noise

Noise levels, measured using ISO 1680, within the maximum levels specified in CEI EN 60034-9.

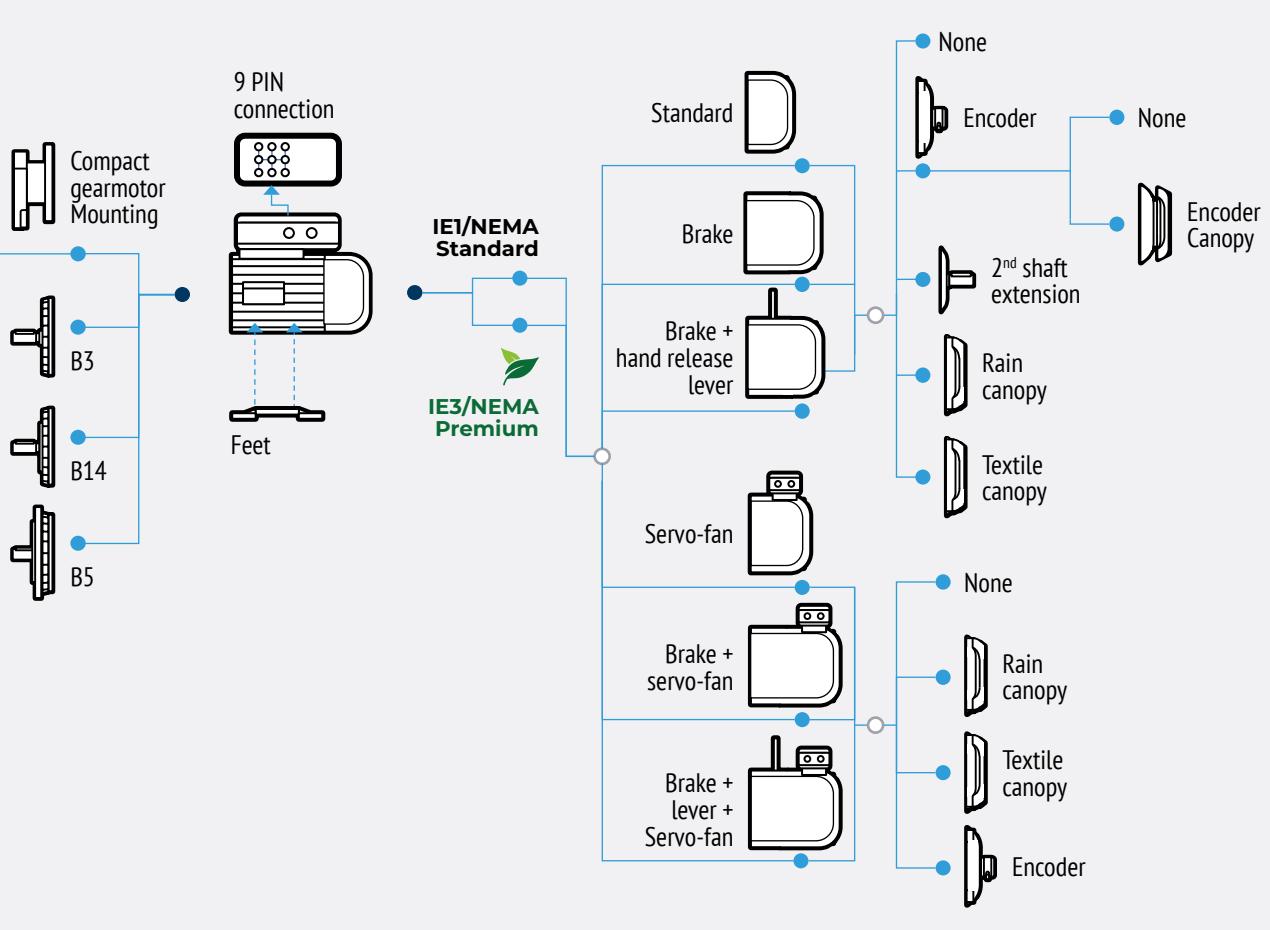

Vibration balancing

Rotor shaft are balanced with half key fitted, and fall within vibration class N, as CEI EN 60034-14.

Product Modularity

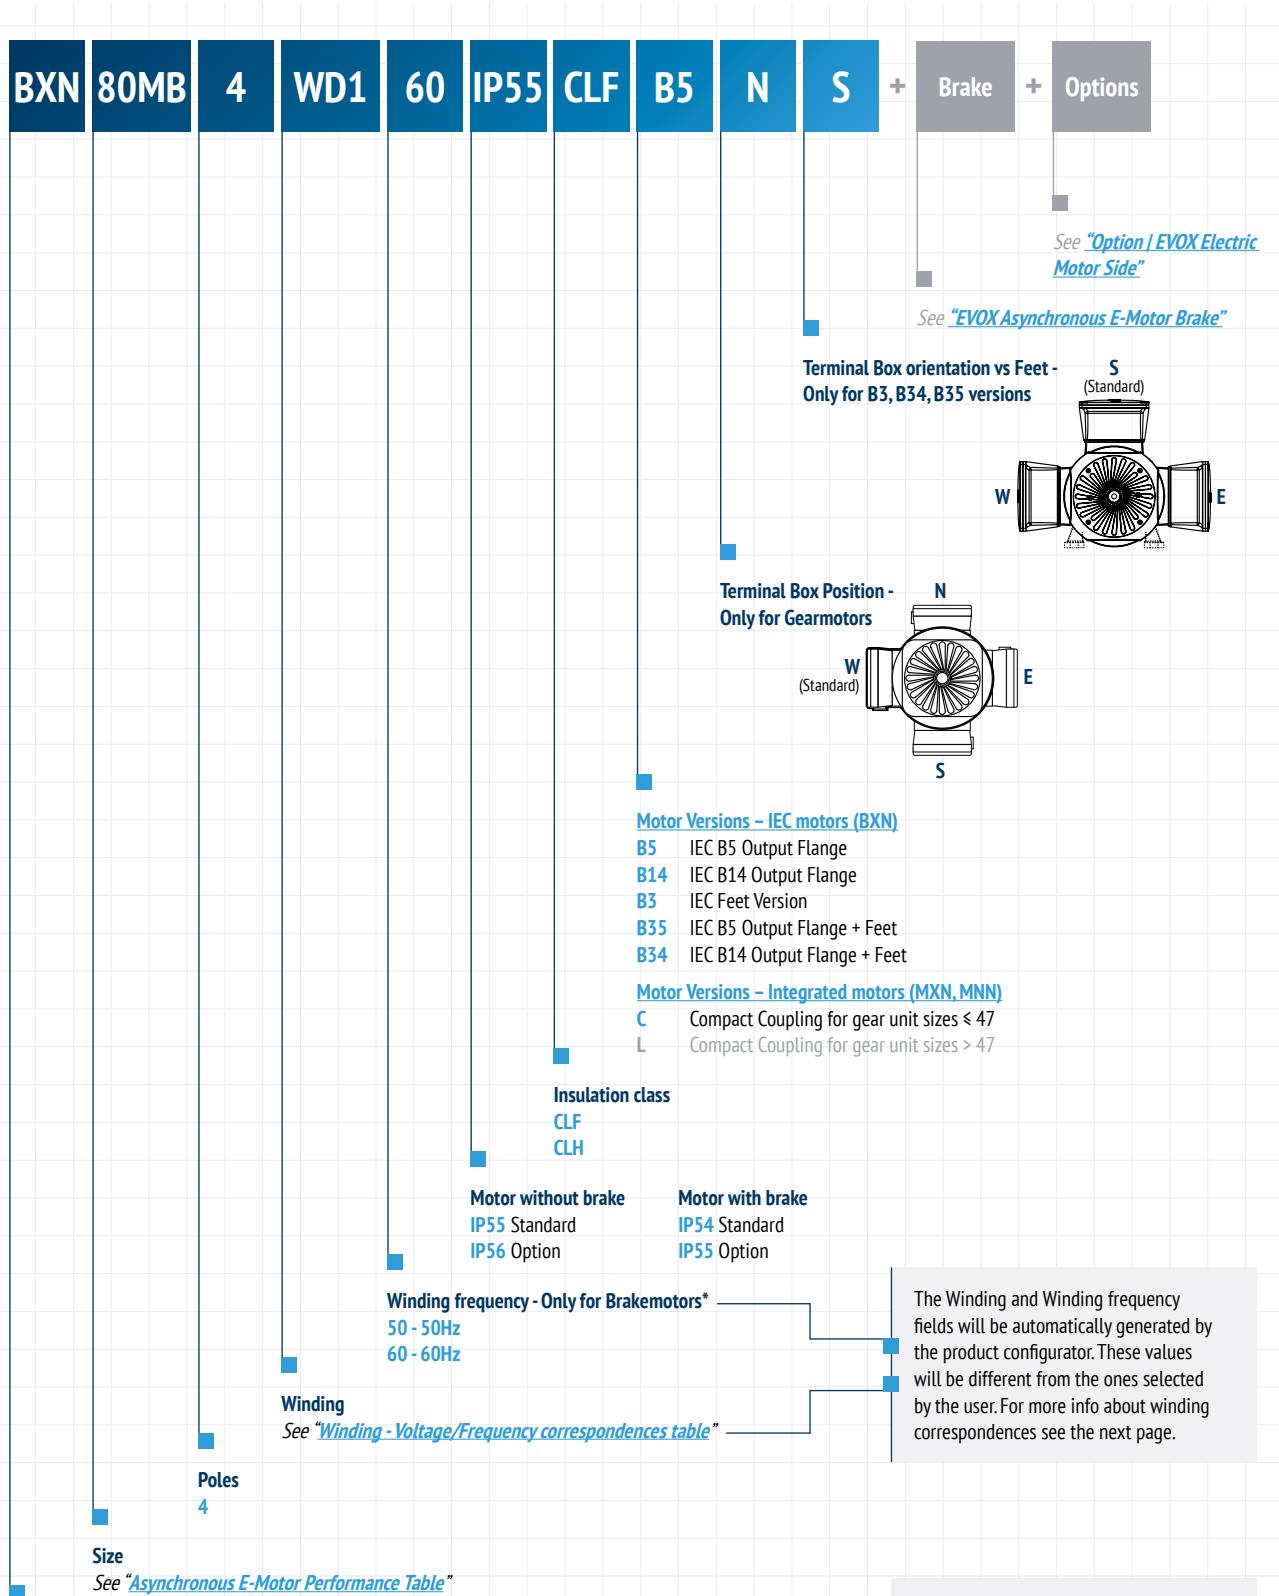

Lots of e-motor versions available to perfectly **match** your application needs.

AC and DC brake are available.

Designation

Asynchronous E-motor series

- BXN** Stand alone motor IE3/NEMA Premium
- MXN** Integrated Motor IE3/NEMA Premium
- MNN** Integrated Motor IE1/NEMA Standard

* The Winding frequency field is present only in the following cases:
 - FD brake with direct power supply (DIR)
 - FA brake, with separate power supply (SA)

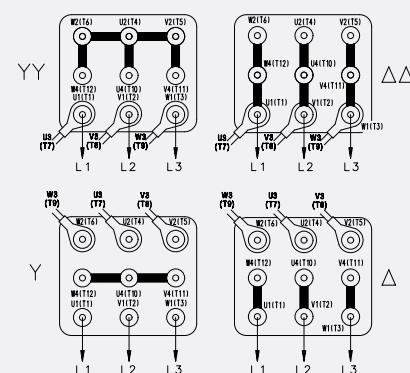

Winding

Terminal box 9 PIN arrangement

Rotation is possible in both directions. If terminals U1, V1, and W1 are connected to line phases L1, L2 and L3, clockwise rotation (from drive end) is obtained. For counter clockwise rotation, switch two phases.

On all EVOX motors, the voltage tolerance is reduced to $\pm 5\%$. For out-of-tolerance operation, temperature may exceed the limit provided in the relevant insulation class by 10 K.

The motors are suitable for operation on distribution European grid with voltage complying with Publication IEC 60038.

Protection class

IPxx

Index of protection

The IP – index of protection – shows the protection rate of the device from any external agents. It is composed of IP and 2 numbers, which show:

- the first digit describes the degree of protection rate against solid objects, dust, the solid particles and bodies.
- the second digit describes the degree of protection offered against liquids.

| Solids Particles < 50 mm | Solids Particles < 12.5 mm | Solids Particles < 2.5 mm | Solids Particles < 1 mm | Solids Particles protected | Solids Particles tight | | | |
|--|-------------------------------------|---------------------------------|---------------------------------|----------------------------------|--------------------------------|---------------------------------|----------------------------------|--|
| Water Vertical dripping water | Water Dripping water < 15° | Water Spraying water | Water Splashing of water | Water Water jet | Water Pressure water jet | Water Immersion < 1 meter | Water Immersion ≥ 3 meters | |
| 1 | 2 | 3 | 4 | 5 | 6 | | | |
| Low level of protection | | | Standard level of protection | | | High level of protection | | |

Standard motors are designed to IP55 degree of protection and IP54 in case of brake motors. They can be installed in dusty or humid environments.

IP examples:

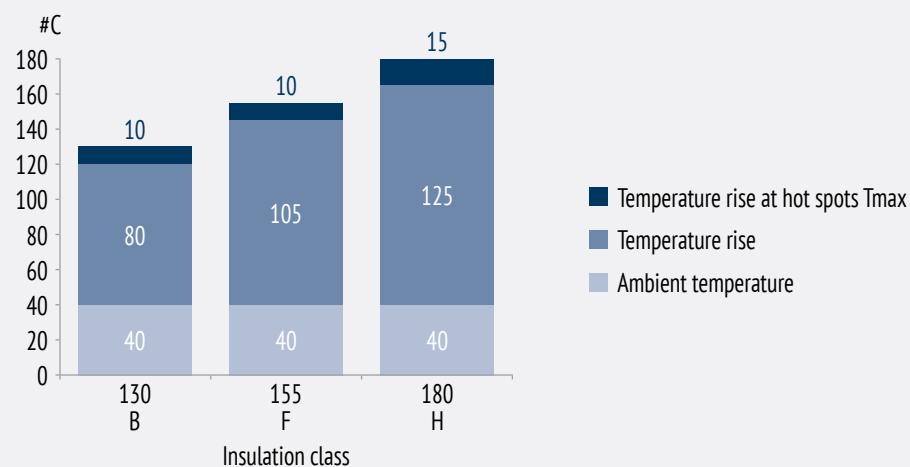

- IP54: • Protection against dust deposits • Protected against spray water
- IP55: • Protection against dust deposits • Protection against water jets from any direction
- IP56: • Protection against dust deposits • Protection against powerful water jets from any direction

Designation

Insulation class

NEMA motor insulation classes describes the ability of motor insulation in the windings to handle heat (Ref. IEC 60085 and IEC 60034-1). There are four insulation classes in use namely: A, B, F, and H. All four classes identify the allowable temperature rise from an ambient temperature of 40° C (104° F). Classes B and F are the most common in many applications.

Temperature rise (ΔT) and maximum temperatures at hot spots (T_{max}) for insulation classes (IEC 60034-1).

CL F

Class F insulation

The Bonfiglioli electric motors have been designed as standard with a class F insulation system (enamelled wire, insulators, impregnation resins). In standard motors, stator windings over temperature normally stays below the 80 K limit corresponding to class B over temperature. Class F allows for temperature rises of 105K (measured by the resistance variation method) and maximum temperatures at the hot spots in the motor of 155°C.

A careful selection of insulating components makes the motors compatible with tropical climates and normal vibration. For applications involving the presence of aggressive chemicals or high humidity, contact Bonfiglioli Engineering for assistance with product selection.

CL H

Class H insulation

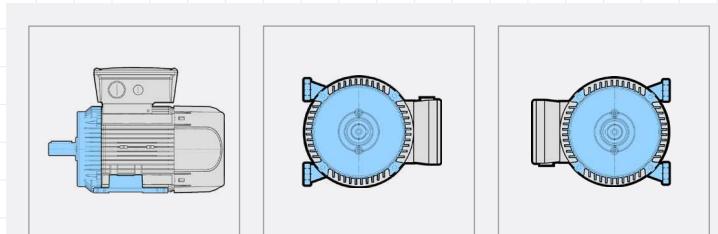

Motors manufactured in insulation class H are available at request. This option fits for special constructions, where the necessary winding is class H and impregnated with special varnishes which enable it to operate in conditions of high temperatures with relative air humidity of up to 100%.

Versions

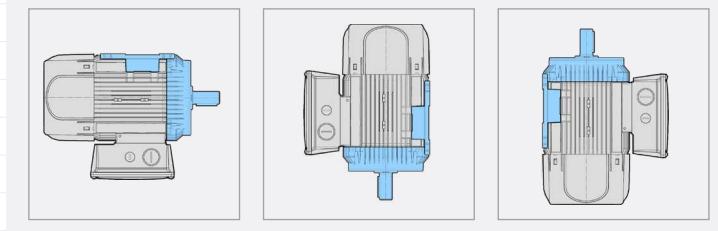

Motor Versions – IEC motors (BXN)

BXN motors are available in the design versions as indicated in the table below as per Standards EN 60034-7. Motor reporting on nameplate the standard mounting position can be mounted in the position illustrated in the following table:

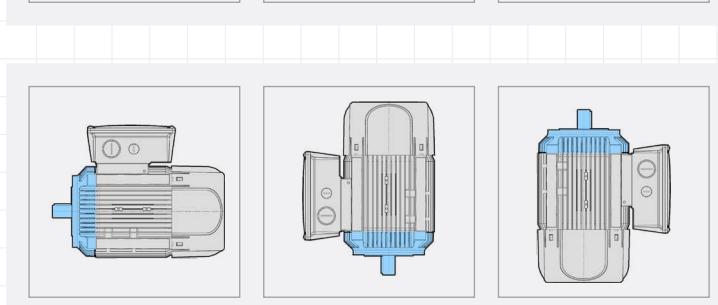

B3

B5

B14

B3 mounting can be combined with B5 or B14 thus becoming B35 in the first case and B34 in the second one. For outdoor applications where the motor is mounted with the output shaft facing downwards, the selection of rain canopy (RC) option is recommended.

This has to be specified during the ordering phase, because it is not present in standard motor versions.

Motor Versions – Integrated motors (MXN, MNN)

In case a compact motors of the EVOX platform (MXN and MNN) is configured as a stand alone product, please refer to the following list:

- C flanges: gear unit size ≤ 47
- L flanges: gear unit size > 47

$T_A = \text{Acceleration torque}$

The T_A indicated in this catalogue is calculated with a finite element method because it is dependent from the Load Characteristic and the time.

$$T_a(t) = T_m(t) - T_L(t) = J \frac{\delta\omega}{\delta t}$$

(J is the motor + load inertia, both reduced at the output motor shaft)

T_A in this catalogue is calculated without a Load Characteristics and with only the EVOX motor inertia.

Please, refer to [Configuration Guidelines & Setup](#) section before the motor configuration, in order to select the correct Power

Tolerances

As per the Norms CEI EN 60034-1, applicable the tolerances here below apply to the following quantities.

| Tolerance rule | Tolerance parameter |
|---------------------------------|---------------------|
| -0.15 (1 - η) P≤50kW | η |
| -(1 - cosφ)/6 min 0.02 max 0.07 | cosφ |
| ±20%* | Slip |
| +20% | I _s |
| -15% +25% | T _s |
| -10% | Max torque |

(*) ≤30% for motors with P_n < 1kw

Code letters for locked-rotor KVA - Nameplate marking

KVA coefficient is a good solution to compare the inrush of different manufacturers' motors than % inrush current. The reason being that if a motor has a high full load current, the % inrush will be lower than a motor with the same inrush current but a lower full load current.

| Letter designation | KVA per horsepower* | Letter designation | KVA per horsepower* |
|--------------------|---------------------|--------------------|---------------------|
| A | 0 - 3.15 | L | 9.0 - 10.0 |
| B | 3.15 - 3.55 | M | 10.0 - 11.2 |
| C | 3.55 - 4.0 | N | 11.2 - 12.5 |
| D | 4.0 - 4.5 | P | 12.5 - 14.0 |
| E | 4.5 - 5.0 | R | 14.0 - 16.0 |
| F | 5.0 - 5.6 | S | 16.0 - 18.0 |
| G | 5.6 - 6.3 | T | 18.0 - 20.0 |
| H | 6.3 - 7.1 | U | 20.0 - 22.4 |
| J | 7.1 - 8.0 | V | 22.4 and up |
| K | 8.0 - 9.0 | | |

(*) locked KVA per horsepower range includes the lower figure up to, but not including, the higher figure.

To determinate KVA per HP, use the following formula:

$$\frac{\text{KVA}}{P_{n1} \text{ [express in HP]}} \quad \text{where } \text{KVA} = V_n I_s \frac{\sqrt{3}}{1000}$$

Brake Option List

Brake Performance

Tables introduction

Legend:

- Brake designation
- Brake release time with half-wave rectifier
- Brake release time with over-energizing rectifier
- Brake engagement time with AC line interruption and separate power supply
- Brake engagement time with AC & DC line interruption
- Brake power absorption @ 20 °C
- Max energy per brake operation
- Braking energy between two successive air gap adjustments

Brake | EVOX Electric Motor

Brake Option List Deep Dive

Asynchronous brake motors

Standard electric motors can be equipped with a brake thus creating a self-braking motor. The brake helps in situations where it is necessary to quickly and safely stop the machine. The Bonfiglioli electric brakemotors incorporate a spring-applied electromagnetic brake which can be powered by a continuous (DC) or asynchronous (AC) power source. All brakes are designed to provide fail-safe operation, meaning that they are applied by spring-action in the event of power failure.

Key:

- 1 Brake disc
- 2 Disc carrier
- 3 Pressure plate
- 4 Brake coil
- 5 Motor rear shield
- 6 Brake springs

When voltage is interrupted, pressure springs push the reinforcement plate against the brake disc. The disc becomes trapped between the reinforcement plate and the motor shield and stops the shaft from rotating. When the coil is energized, a magnetic field strong enough to overcome the spring action attracts the reinforcement plate, so that the brake disc – which is integral with the motor shaft – is released.

Brake type selection

FD brakes [DC brake power supply]: they are suitable for applications where a smooth, progressive, silent and soft reaction time is requested. Due to its properties and the extensive use on the market, this solution is **highly suggested by Bonfiglioli**.

FA brakes [AC brake power supply]: they are suitable for applications where a fast reaction time and a quick stop is requested.

| Case | E-motor supply | Brake supply | Brake choices | Separate brake supply |
|------|----------------|-----------------------------------|----------------------|-----------------------|
| 1 | AC | Connected on e-motor terminal box | FA FD + rectifier | DIR |
| 2 | AC | Dedicated AC | FA FD + rectifier | SA |
| 3 | AC | Dedicated DC | FD | SD |

Bonfiglioli solution

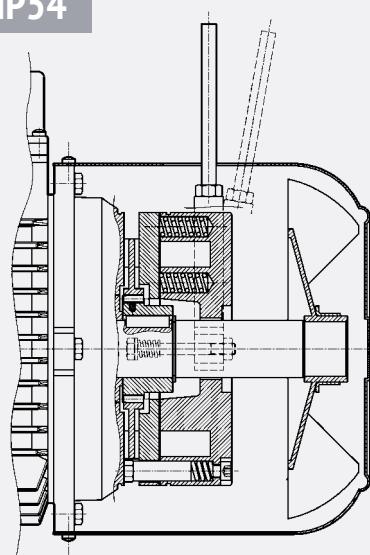

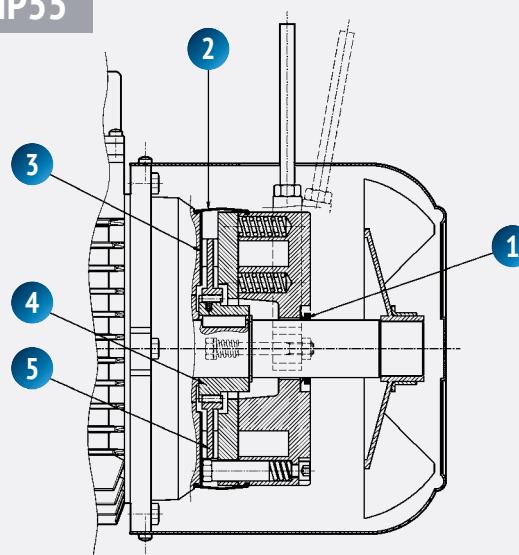

Brake type

FD

DC brake type

Direct current toroidal-coil electromagnetic brake bolted onto the motor shield. Preloading springs provide axial positioning of magnet body. Brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device. Brake torque factory setting is indicated in the corresponding motor rating charts. Braking torque may be modified by changing the type and/or number of springs. If requested, the motors may be equipped with a manual release lever with automatic return (R) or a system for holding the brake in the released position (RM). See variant in paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations. FD brakes ensure excellent dynamic performance with low noise. DC brake operating characteristics may be optimized to meet the application requirements by choosing from the various rectifier/power supply and wiring connection options available.

For applications involving lifting and/or high hourly energy dissipation, [contact Bonfiglioli's Technical Service.](#)

IP54**IP55**

BXM, MXN and MNN brakemotors comes with an IP54 protection degree as standard and it is possible to configure them with an IP55 as an option. If **IP55** is selected, the following construction variants will be applied:

- 1 V-ring at N.D.E. of motor shaft
- 2 Dust and waterproof rubber boot
- 3 Stainless steel ring placed between motor shield and brake disc
- 4 Stainless steel hub
- 5 Stainless steel brake disc

For FD technical specifications, refer to the performance section ([link](#))

Brake | EVOX Electric Motor

Options | Brake

FA

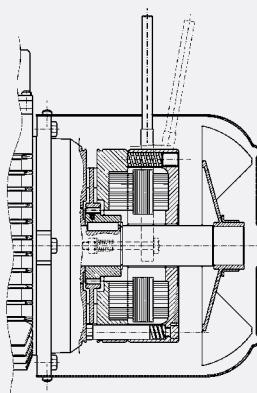

AC brake type

Electromagnetic brake operates from three-phase alternated current power supply and is bolted onto conveyor shield. Preloading springs provide axial positioning of magnet body. Steel brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device. Brake torque factory setting is indicated in the corresponding motor rating charts. Spring preloading screws provide stepless braking torque adjustment.

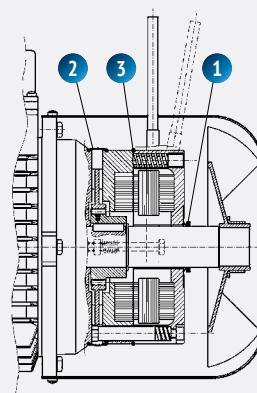

Torque adjustment range is $30\% M_{bMAX} < M_b < M_{bMAX}$ (where M_{bMAX} is maximum braking torque as shown in the tab). Thanks to their high dynamic characteristics, FA brakes are ideal for heavy-duty applications as well as applications requiring frequent stops/starts and very fast response times. If requested, the motors may be equipped with a manual release lever with automatic return (R). See variant in paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations.

For applications involving lifting and/or high hourly energy dissipation, [contact Bonfiglioli's Technical Service](#).

IP54

IP55

Standard protection class is IP54.

Brake motor FA is also available in protection class **IP55**, which mandates the following variants:

- 1 V-ring at N.D.E. of motor shaft
- 2 Dust and waterproof rubber boot
- 3 O-ring

For FA technical specifications please refer to the performance section ([link](#))

Brake hand release systems

Spring-applied brakes type FD and FA may be equipped with optional manual release devices. These are typically used for manually releasing the brake before servicing any machine or system parts operated by the motor.

Availability of the various disengagement devices is indicated below:

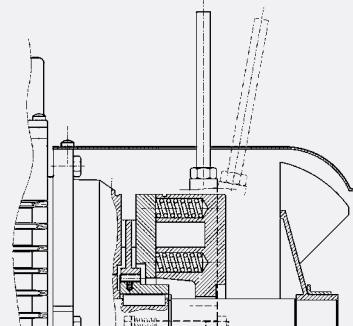

| | R | RM |
|---------------|--|--|
| BXN_FD | BXN 63 ... BXN 90 BXN 100 ... BXN 132 | BXN 63 ... BXN 90 BXN 100 ... BXN 132 |
| BXN_FA | BXN 63 ... BXN 90 BXN 100 ... BXN 132 | — |

R**Lever with return spring**

With this options, the return spring brings the release lever back in the original position.

RM**Lever with a release blocked position**

On brake motors type FD, if the RM option is specified, the release device may be locked in the "release" position by tightening the lever until its end becomes engaged with a brake housing projection. Availability of the various disengagement devices is indicated below:

**AC/DC rectifier type**

The FD brake coil can be directly fed with DC current or by an AC/DC connection operated by a diode half-wave rectifier ($V_{DC} \approx 0,45 \times V_{AC}$). A rectifier is a circuit that converts the Alternating Current (AC) input power into a Direct Current (DC) output power. Evox products are available in versions NB and SB, as detailed in the table below:

| | Brake | Standard | At request |
|---------|-----------------------|----------|------------|
| BXN 63 | FD 02 | | |
| BXN 71 | FD 03 - FD 53 | | |
| BXN 80 | FD 04 | | |
| BXN 90S | FD 14 | | |
| BXN 90L | FD 05 | | |
| BXN 100 | FD 15 | | |
| BXN 112 | FD 06S | | |
| BXN 132 | FD 56 - FD 06 - FD 07 | | |

(*) $t_{2c} < t_{2r} < t_2$

NB**Simple half-wave rectifiers**

Rectifier **NB** lets just one half of each complete AC supply wave through, to transform it into a DC supply. The brake release response time is reduced.

SB**Double half-wave rectifiers:**

Rectifier **SB** with electronic energizing control over-energizes the electromagnet upon power-up to cut brake release response times and then switches to normal half-wave operation once the brake has been released.

Use of the **SB** rectifier is mandatory in the event of:

- High number of operations per hour
- Reduced brake release response times
- Brake exposed to extreme thermal stress

Brake | EVOX Electric Motor

Options | Brake

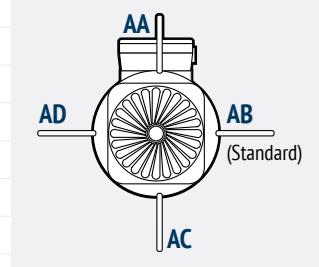

Brake hand release lever position

AA

Release lever orientation

Unless otherwise specified, the release lever is located 90° away from the terminal box – identified by letters [AB] in the diagram on the right – in a clockwise direction on both R and RM options.

Alternative lever positions [AA], [AC] and [AD] are also possible when the corresponding option is specified.

Brake supply

230

FD brake power supply

A rectifier installed inside the terminal box feeds the DC brake coil. Wiring connection across rectifier and brake coil is performed as factory standard.

On all single-pole motors, the rectifier is connected to the motor terminal board.

Brake power supply voltage is indicated in the following table, regardless of the mains frequency:

| 4P |  | Motor power supply | Brake connected to terminal board power supply | Brake connected to a separate power supply Voltage | FD SD | FD SA |
|--|---|---|--|--|-------|-------|
| BXN 63 ... BXN 90 BXN100 .. BXN 132 | More options depending on the chosen winding and frequency | The brake works with the chosen winding configuration of the motor power supply. For more information please refer to the voltage and frequency section. In any case, you can find connection info on the terminal kit integrated in the motor. | | 24 | | |

| | | | | 440 | | |
| | | | | 460 | | |

 Configurable for motors with 50Hz and 60Hz power supply

 At request - Not configurable with power supply as standard

FD brake connection

For switch-pole motors, and where a separate brake power supply is required, connection to rectifier must comply with brake winding voltage stated in the motor nameplate.

Because of the inductive load type, brake control and DC line interruption must use contacts from usage class AC-3 to IEC 60947-4-1.

Table (1) – Brake coil with power supply from motor terminals, a.c. line interruption.

Table (2) – Brake coil with separate power supply, a.c. line interruption.

Table (3) – Brake coil with power supply from motor terminals, a.c. and d.c. lines interruption.

Table (4) – Brake coil with separate power supply, a.c. and d.c. lines interruption.

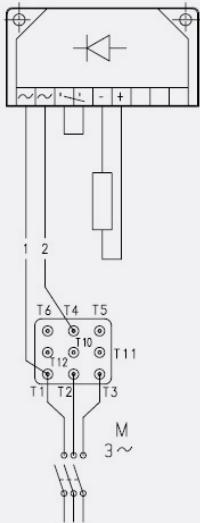

Table (1)

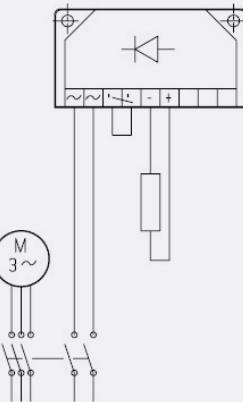

Table (2)

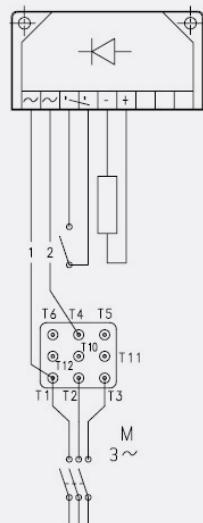

Table (3)

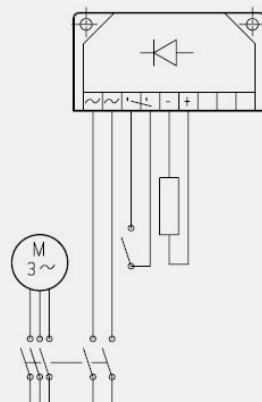

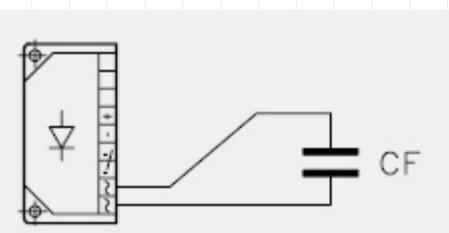

Table (4)

Brake connection when equipped with the CF option:

Motors with FD brake, when fitted with the suitable capacitive filter at rectifier input (option CF), meet the emission limits required by Standard EN 61000-6-3:

«Electromagnetic compatibility - Generic Emission Standard - Part 6.3: Residential, commercial and light industrial environments»

Brake | EVOX Electric Motor

Options | Brake

Brake supply

230

FA brake power supply

In single speed motors, power supply is brought to the brake coil directly from the motor terminal box. As a result, brake voltage and motor voltage are the same. In this case, brake voltage indication may be omitted in the designation. The following table reports standard AC brake power supply ratings for single pole motors:

| 4P | Motor power supply | Brake connected to terminal board power supply | Brake connected to a separate power supply |
|--|---|--|--|
| | | Voltage | FA SA |
| | | 200 | |
| | | 220 | |

| | | 415 | |
| | The brake works with the chosen winding configuration of the motor power supply. | 440 | |
| | For more information please refer to the voltage and frequency section. In any case, you can find connection info on the terminal kit integrated in the motor. | 460 | |
| | | 575 | |

 Configurable for motors with 50Hz and 60Hz power supply

 Configurable only for motors with 50Hz power supply

 Configurable only for motors with 60Hz power supply

FA brake connection

The diagram below shows the wiring when the brake is connected directly to same power supply of the motor:

Switch-pole motors and, at request, single-pole motors with separate power supply are equipped with an auxiliary terminal board with 6 terminals for brake connections. In this version, the motors feature a larger terminal box. See diagram below.

Separate brake supply

SD

Separate DC brake supply

The brake coil is directly fed with DC current and the rectifier is out of the scope of the supply. The rated coil voltage must be specified, e.g. 24SD.

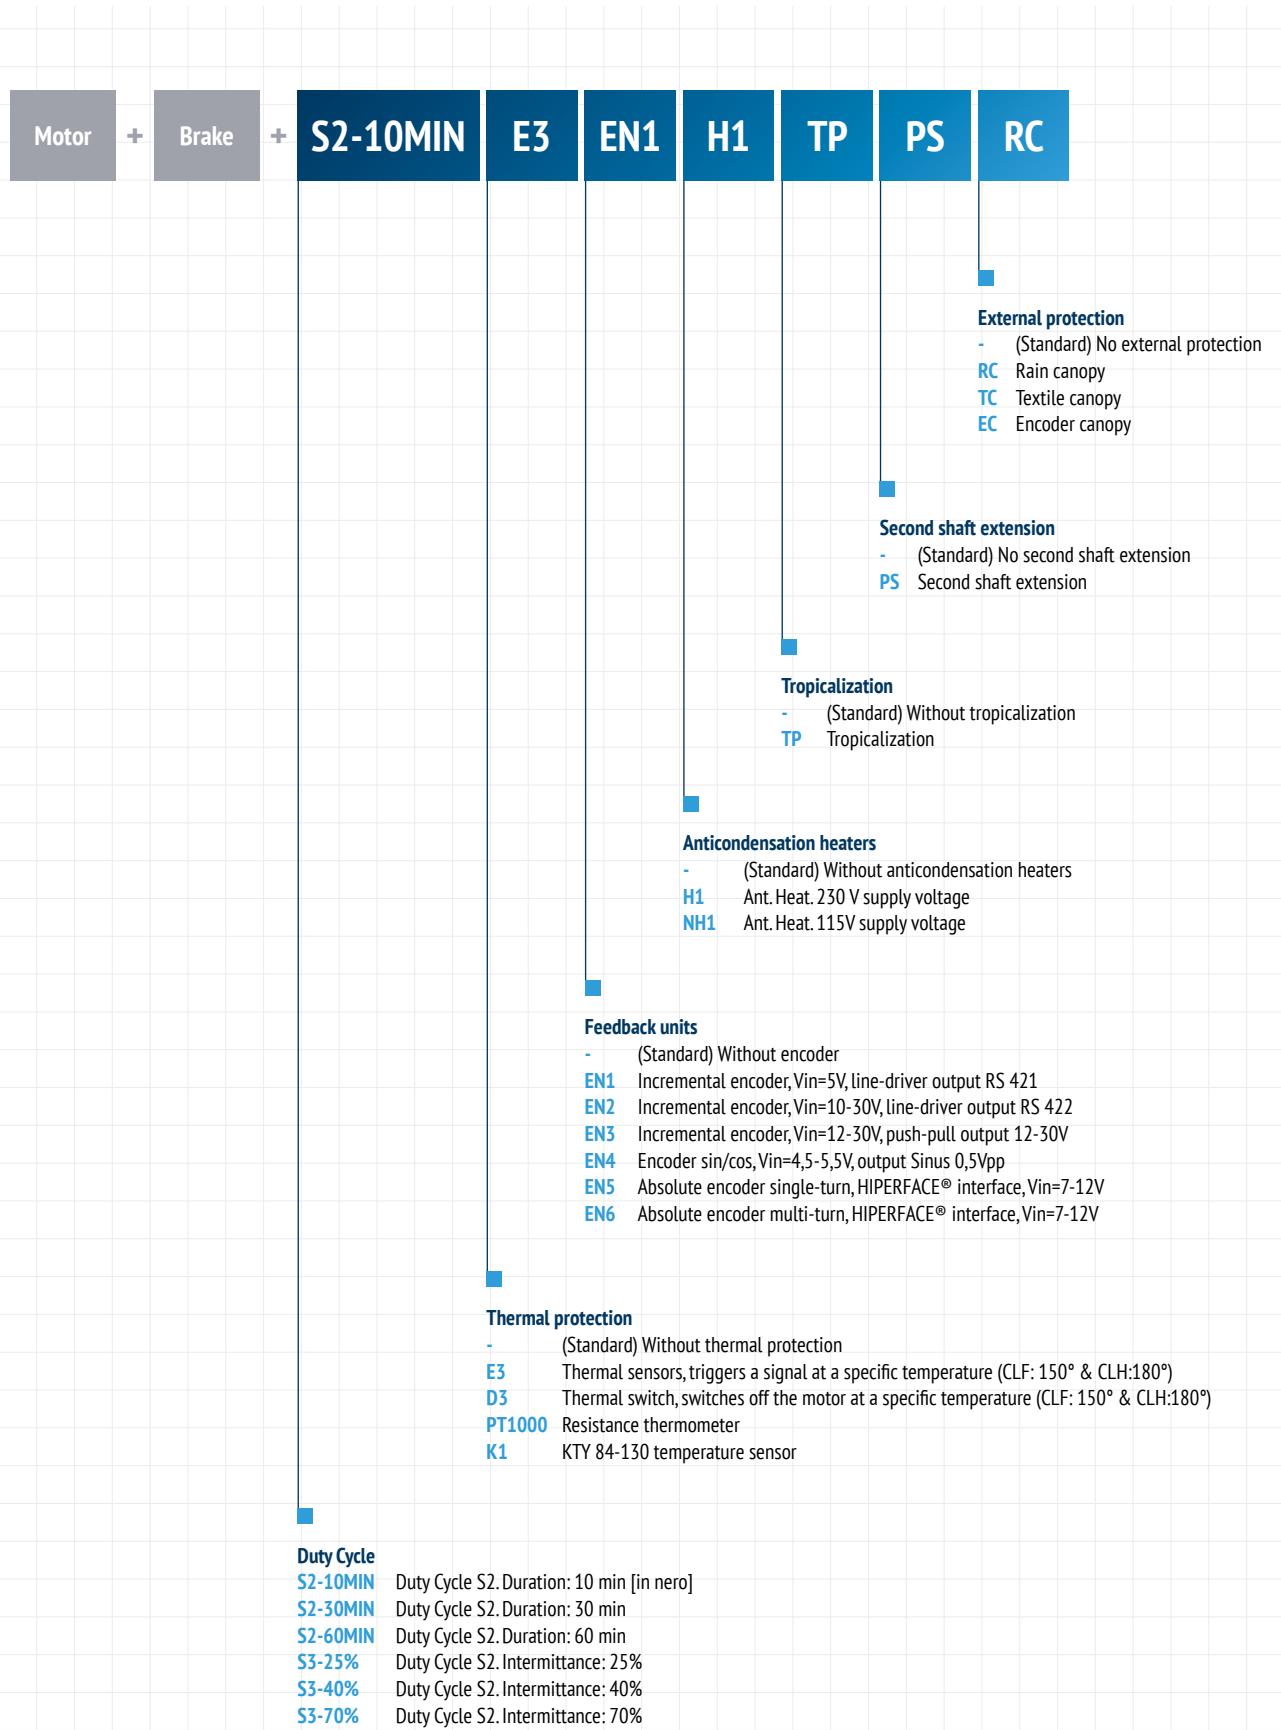

SA

Separate AC brake supply

The brake coil is directly fed through an independent line, separately from the motor. In this case, the rated coil voltage must be specified, e.g. 230SA. The option is applicable to all motors with FD and FA brake type.

Option List Deep Dive

Duty Cycle

Unless specified, catalog motor power refers to continuous duty S1. Any different condition has to be classified in the correct Duty Cycle, according with CEI EN 60034-1.

S2...MIN

S2 Duty Cycle (Limited duration duty)

This type of duty is characterized by operation at a constant load for a limited time [t_f], which is shorter than the time required to reach thermal balance, followed by an idle period [t_r] where the motor can return to the ambient temperature.

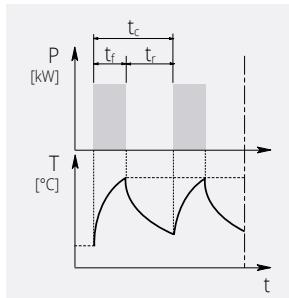

The duration of the duty cycle is: $D=t_f+t_r$

t_f = work time under constant load

t_r = idle period

S3...%

S3 Duty Cycle (Periodical intermittent duty)

This type of duty is characterized by a sequence of identical operation cycles formed by a constant load operation and an idle period.

For this type of duty, the starting current does not significantly affect overtemperature.

t_f = work time under constant load

t_r = idle period

t_c = cycle time

$$f = \frac{t_f}{t_f + t_r} \cdot 100$$

t_f = work time under constant load

t_r = idle period

For a S2 & S3 duty cycle motor, the required motor power should be multiplied by the coefficient reported in the following table.

| | Type of duty | | | | | | S4 - S9 |
|-------|--------------|------|------|-------------------|-----|-----|------------|
| | S2 | | | S3 | | | |
| f_m | D (min) | | | Intermittance (I) | | | Contact us |
| | 10 | 30 | 60 | 25% | 40% | 70% | |
| 1.35 | 1.15 | 1.05 | 1.25 | 1.15 | 1.1 | | |

If cycles from S2 to S9 are chosen, the motor nameplate will be marked with the cycle name, an increased power rating and electrical data to suit the type of duty.

For further details, please contact [Bonfiglioli's Technical Service](#)

Capacitive filter

CF

Capacitive filter

An optional capacitive filter is available for brake motors type FD only. When the suitable capacitive filter is installed upstream of the rectifier (option CF), motors comply with the emission limits required by standard EN6100-6-3:2007 "Electromagnetic Compatibility – Generic Emission Standard – Part 6-3_Residential, commercial and light industrial environment". Essentially, the capacitive filter absorbs some of the electromagnetic waves interference so that the motor will be suitable for light industrial, residential and commercial applications.

Thermal protection

In addition to the standard protection provided by the magneto-thermal device, motors can be supplied with built-in thermal probes to protect the winding against overheating caused by severe and demanding application or by an insufficient ventilation of the environment.

This additional protection is highly recommended on servo-ventilated motors (IC416).

E3

Thermistors

These are semi-conductors having rapid resistance variation when they are close to the rated switch off temperature (150°C for CLF or 180° for CLH insulation class). Variations of the R=f(T) characteristic are specified under DIN 44081, IEC 34-11 Standards. Positive temperature coefficient thermistors are normally used (also known as PTC "cold conductor resistors"). Usually this kind of thermal protection is easy to be found on inverters.

Thermistors cannot control relays directly and must be connected to a suitable disconnect device. Thus protected, three PTCs connected in series are installed in the winding, the terminals of which are located on the auxiliary terminal-board.

D3

Bimetallic thermostats

These types of protective devices house a bimetal disk. Bimetal switches operate on the principle of mechanical deformation as a result of long-term heating. Bimetal strips bent as a result of such heating have a spring action that results in sudden reversal of the curvature (concave to convex or vice-versa). When the rated switch off temperature (temperature (150°C for CLF or 180° for CLH insulation class) is reached, these temperature detectors (NC contacts) can deactivate an auxiliary circuit. The circuit can only be reclosed following a considerable fall in temperature. Three bimetallic thermostats connected in series are usually employed, with normally closed contacts. The terminals are located on an auxiliary terminal-board.

Bimetal switches are suitable protection devices in the case of slowly rising motor temperatures. When the motor current rises quickly (e.g. with a locked rotor), these switches are not suitable due to their large thermal time constants.

Option List Deep Dive

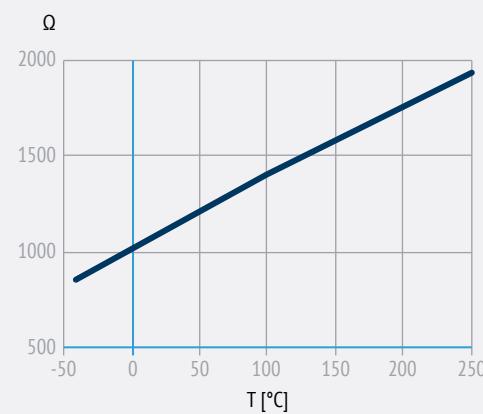

PT1000

Resistance thermometer

The resistance thermometer has a chip for a temperature sensor, the resistance of which changes in relation to temperature according to a series of reproducible basic values. The changes in resistance are transferred as changes in current.

At 0 °C, the measurement resistances are adjusted to 1000 Ω for the Pt1000 and correspond to the accuracy class B (i.e. the relationship between resistance and temperature). The limit deviation is ±0.3 °C, and the admissible deviations are defined in EN 60751. The Pt1000 resistance thermometer will, in the future, gradually replace the KTY84-130 temperature sensors available today. The relationship between the temperature and the electrical resistance of conductors is utilized in the Pt1000 to measure the temperature, just like with the additional resistance thermometers described above. Pure metals undergo larger changes in resistance than alloys and have a relatively constant temperature coefficient.

K1

KTY 84-130 temperature sensor

The design characteristics of this sub-group of PTC thermistors allow them to be used as positive temperature coefficient sensors with variable resistance. Functioning temperature range: 0°C ... +260°C. Within the measuring range, however, the KTY 84-130 characteristic rises almost linearly. The temperature sensor is embedded in the winding overhang of the motor in the same way as the components mentioned above. It is characterized by its outstanding precision, high reliability, and temperature stability, as well as a fast response time. Thanks to these properties, which permit the almost analog monitoring of winding temperature, the KTY 84-130 is preferred for converter operation. Thermistors cannot control relays directly and must be connected to a suitable disconnect device. Terminals (polarized) for 1 x KTY 84-130 are provided on an auxiliary terminal strip.

Feedback units

Motors can be combined with six different types of encoders in order to achieve feedback circuits. The installation requires an expansion module which depends on the type of the encoder selected.

Configurations with double-extended shaft (PS) and rain/fabric canopy (RC, TC) are not compatible with encoder installation.

EN1

Incremental encoder

These encoders are speed sensors obtained with optic-electronic technology and can be utilized as speed transducers. They are composed by an electric circuit and an optic disk integral with the shaft. Usually, there are 2 main standards for incremental encoder outputs: the Push-pull and the Line driver. The first one is useful in case of long wirings, the second one for applications in high electromagnetic pollution environments.

EN2

EN3

EN4

SIN/COS encoder

These encoders are both speed and position sensors obtained with optic-electronic technology and can be used as position and speed transducers at the same time. Usually employed for applications that require very high dynamic features.

EN5

EN6

Absolute encoder

These encoders are position sensors obtained with optic-electronic technology and can be utilized as position transducers. Usually employed for applications that require high precision

| | EN1 | EN2 | EN3 | EN4 | EN5 | EN6 |

The Bonfiglioli ACU and ANG inverter series can manage all 6 types of encoders mentioned above and can be easily selected through the product configurator platform.

Options | EVOX Electric Motor Side

Option List Deep Dive

Anti – condensation heaters

H1

Anti – condensation heaters

Where an application involves high humidity or extreme temperature fluctuations, e.g. inactive motors in humid atmospheres or motors that are subject to widely fluctuating temperatures, motors may be equipped with an anti-condensate heater. A single-phase power supply is available in the auxiliary terminal board inside the main terminal box.

Values for the absorbed power are listed below:

| | H1 1~230V ± 10% P[W] |
|-----------------------------|----------------------------|
| BXN 63 ... BXN 80 | 10 |
| BXN 90 BXN100 .. BXN 132 | 25 |

Warning! Always cut off the anti-condensation heater power before operating the motor.

Tropicalization

TP

Tropicalization

The TP option uses stators that are impregnated with highly hydrolysis-resistant resins. This allows the motors to be used in areas with increased air humidity and temperature, such as in tropical climate conditions.

The used wiring insulation materials and the impregnating resin protect the motor against termite-related damage

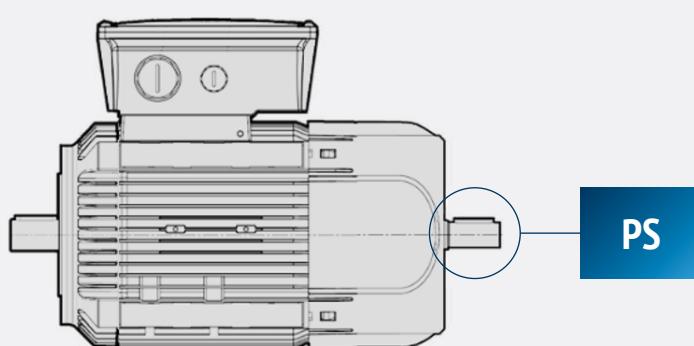

Second shaft extension

PS

Second shaft extension

The PS option provides the motor for an additional shaft end. This second shaft end is designed with a conventional keyway and key in accordance with DIN 6885 Sheet 1 (ISO 773).

This option is not compatible with variants RC, TC, EC, U1, EN1, EN2, EN3, EN4, EN5, EN6. For shaft dimensions please see motor dimensions tables.

External protection

External protection canopies are used to prevent damages caused by external conditions, such as rain or cellulose particles to the electrical motor.

RC

Rain canopy

The rain canopy protects the motor from dripping and avoids the penetration of solid bodies. It is recommended when motor is installed in a vertical position with the shaft downwards. Only in this position a perfect coverage from rain is granted. The canopy extends the motor or brake motor length, please check the dimension table ([link](#)).

The drip cover is not compatible with variants PS, EN1, EN2, EN3, EN4, EN5, EN6.

TC

Textile canopy

Option TC is a cover variant for textile industry environments, where lint may obstruct the fan grid and prevent a regular flow of cooling air. The overall dimensions are the same as drip cover type RC. This option with variants PS, EN1, EN2, EN3, EN4, EN5, EN6.

**EC**

Encoder canopy

Option EC is a cover variant specifically made for our encoders. It protects them from impacts and may help in prolonging their productive life.

Certificates

ACM

Motor certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of Bonfiglioli's Quality System.

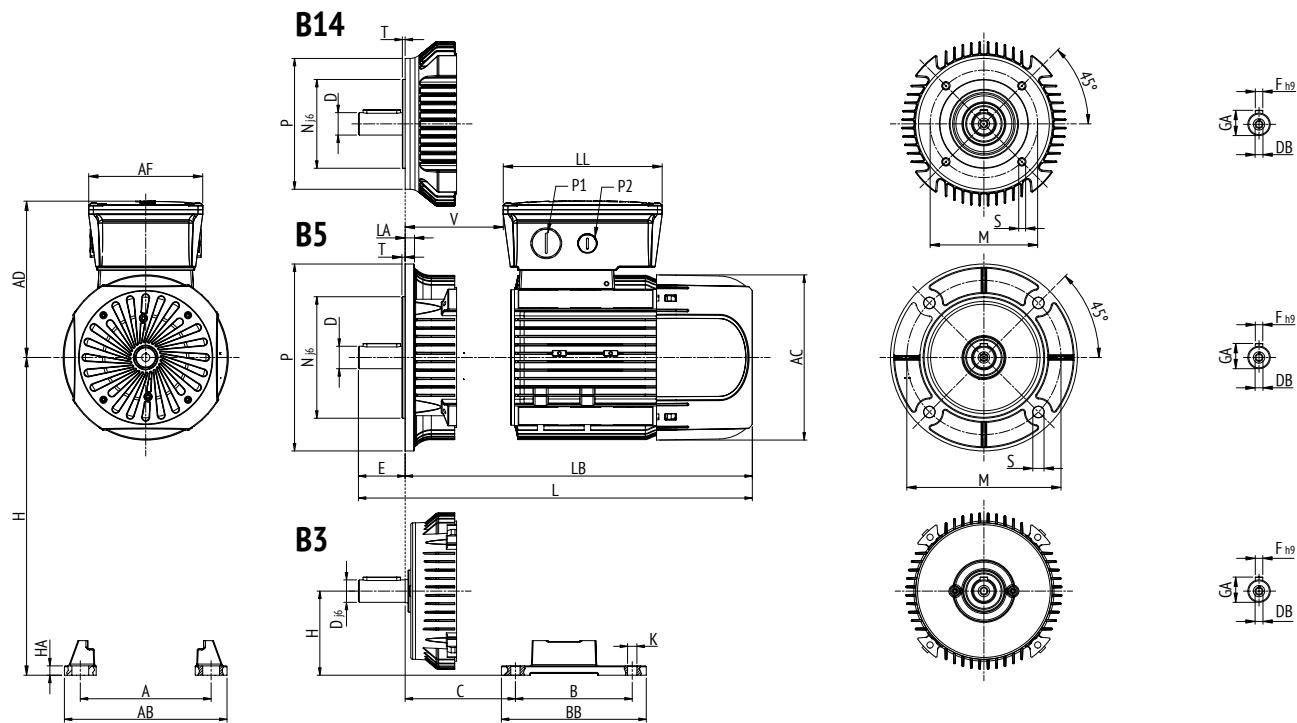

CC

Inspection certificate

The document entails checking the order compliance, visual inspection of external conditions and instrumental testing of the electrical characteristics in unloaded conditions. Inspected units are sampled within the shipping batch and marked individually.

ENGINEERING

The test centers at Bonfiglioli

Bonfiglioli's test laboratories support the various phases of the product life cycle, including development, certification and the production of solutions developed and manufactured in our plants around the world.

Our specialists are true partners to the R&D, technical and quality departments. They help validate each Bonfiglioli product from the smallest critical component to the overall solution.

The test centers regularly conduct additional tests to ensure the product durability and confirm the specifications declared during the official approval stage.

We support our customers' projects from beginning to end.

At Bonfiglioli, we believe that product development relies on passion, efficient processes, and the ability to understand our customers' needs accurately.

First, our team identify the customer's needs after in-depth analysis drawn from our specific application expertise.

Through dedicated calculation tools, we can simulate the transmission's capabilities and performance allowing reducing development time.

The alignment phase allows us then to adapt our proposal according to key factors of performance, installation and maintenance.

Global Presence

Bonfiglioli is a market force with a presence spanning 22 countries on 5 continents. Our organization makes the most of geographic proximity to offer complete solutions combining efficiency and competence.

We Are a Global Company

Thanks to an international network of sales branches and closely interconnecting production plants, we can guarantee the same high standards of Bonfiglioli quality anywhere at any given time. Aware that our direct presence in local markets is the key to long-lasting success, our family includes 20 sales branches, 13 production plants and more than 500 distributors around the world.

Our organization is always close by, offering complete and efficient solutions and supporting our customers with dedicated services, such as co-engineering or after-sales assistance.
